So you might have seen my thread about my obelisk skin:

<http://www.renegadeforums.com/index.php?t=msg&th=31053&start=0&rid=24209>

My obelisk skin just decided to stop working. So I download the one from that thread and it's still messed up. Notice below that it's MUCH darker than it should be. What's going on?

nevermind my computer is just really been not working lately. My hard drive is getting full, it's supposed to be 160gb but i only have 60gb on my C:\ drive. The skin works now.

And by defining "doesn't work", if you looked at the screen shot in this thread and the one i posted a few lines above, you would see what I meant by "not working"

you could o just said the skin didn't work, not the obby. That would of been less illusive.
