These stereograms are two images that (crudely) imitate what each of your eyes would see if they were looking at the objects in real life. We have the perception of depth and distance because each of our eyes receives a slightly different image due to their spacing.

By relaxing or crossing your eyes (so each one points to the same point on either image), the image pops out of you screen and appears to be 3d.

Further research and viewing techniques are available at these links.

Second link thanks to MGamer

Machine Emplacement

What do you think for a first try? Pedastool and Submarine

EDIT: Added submarine. This one is a little harder, mainly due to the light's spacing and the lights' bad culling through the mesh.

EDIT-2: Added Ped, unfortunately without a nuke.

M01 - Light House

EDIT-3: Added M01 lighthouse to stop people crashing into Altzan's rocks :] Due to its size I've made it cross-eyed viewable.

M01 - Barn

EDIT-4: M01 house added, best viewed cross-eyed. M01 - Church

EDIT-5: Church from M01, on the left side of the map while advancing.

After seeing the perspective of the vertical walls crooked, I'm convinced the W3D engine needs a shift-lens M05 - King cash

EDIT-6: Added the statue on M06 that gives you a tonne of cash when killed in multi-player. Note that the image has been lit up due to dullness, and the level's snow have been removed as it is impossible to have in the same position while during each shot.

If you cannot view these, and have ready the instructions thoroughly, please update your eye-drivers (thank TD for the advice).

It takes time, patience, and luck IMO.

I'm surprised I already knew what this was about.

That looks awesome!!

A tip for the people that cant get it to work: Cross your eyes until you see the picture 3 times , then focus on the middle one
