I've been playing APB a lot recently and decided I want to play Renegade once again on my new system, cuz its pretty beastly.

Anyways, I put the disk in, and it autoloads fine, click Install, and Setup.exe "cannot find the file" DXSetup\Setup.exe.

When I run the Setup.exe file in DXSetup folder, nothing happens.

I tried setting it up to run in XP Compatibility mode, but still nothing is happening.

Is there something else I can try? Anything? If I copy all the files to my hard drive, could I install from there?
