Hello Team,

New but old memeber. PLayered a few years back and finally got the game again. I see no servers on the advanced game listings? My problem or global? Thanks. I installed the game yesterday. Just put down a nick an password. Hit Login and Bamm was playing within a few minutes. Is there something else i should do?

Holy shit, it's u6795!

In all seriousness, either the nickname you chose was already taken, you have an objects.ddb file in your Renegade\Data folder, or something else is messed up. I do remember that Vista fucks with Renegade's online, so it could be something else if it still doesn't work.
