Hi,

I've recently built myself a new computer, and I'm having trouble installing Renegade. Immediately after launching the Setup, the application crashes with Vista's standard 'Setup has stopped working'.

I have tried running the setup under every available Compatibility mode, and using 'Run as Administrator' to no success. I have also updated my DirectX, and installed all Vista updates. I have tested the disk and disk drive in another computer (Running XP) and both work fine.

Any suggestions on solving this issue? ("Vista is crap, get another OS" isn't helpful...)

Specs: Intel Q6600 2.4 Quad, 4GB 800MHz RAM, 1GB ATI HD4670.

Regards, thefriggi

I think the real issue might be "64bit".

I can run Renegade on a 64-bit Vista - it seems to be luck of the draw, although I'm using the same processor and a similar graphics card.

Bah, solved the problem. iTunes prompted me to re-install a Sound driver, which I did. After which the Setup loaded with no problems, the game is now installed and running brilliantly.

The setup uses a directX accelerated 3D thing, including sound, faulty drivers would cause this. Thanks for telling us.
