1.

Are missing 'textures' also fixed with the TT patch? I mean that this:

Has to be like this (although it seems that those 'MCT screens' are different for each building):

2.

Is the lag/map exploit already known on Canyon, where you can use this part of the 'tunnel' (red) + lag, which causes you to move to the blue part of the Bunker (where you really are), while your view of your character stays in the green part:

The fake 'view/shooting' of your character (huge shaking screen), which allows you to get kills around corners:

3.

Are we gonna get an automatic reloaded pistol at the start of a match? At 'pure/hardly modified' servers, you always have to reload your pistol at the start of the round, because it starts with 0 rounds.

4.

Are there more 'vehicle blockers' added on certain maps, to prevent vehicles getting at certain spots/getting stuck?

Are there more 'vehicle blockers' added on certain maps, to prevent vehicles getting at certain spots/getting stuck?

That'd be extremely useful. We should probably report the places you easily get stuck with vehicles so at least most could be fixed, eh?

We do not have a active guy doing leveledit work, 1, 2 and 4 seem to require LE changes that will not be done until we have someone who can do these. The pistol bug has been fixed though; you no longer have to reload.

Awsome, its just so irratating to have to reload the pistol everytime you get another character, and if you forget to do this then it might might make you loose in a fight.

1 needs a gmax change, or maybe LE too, in gmax it requires 1 digit to be changed (in the name of the mtc screen) so it displays the mtc right

stuff, but i wont help.

—noun

1. a person who devotes himself or herself to one subject or to one particular branch of a subject or pursuit.

—noun

1. a person who has special skill or knowledge in some particular field; specialist; authority: a language expert.

Specialist, sure you can have that title. I don't give you expert badge though.

Well, speciallist is wrong as well, because if he would devote himself then why doesn't he offers his help? Or at least tries to

Let me know what you need doing and I will look into it. I do all the LevelEdit work for AR after

all....

I'm happy to help if anyone has any LE problems.

Problem one, as ERroR states, is simply a badly-named mesh. Normally it would be replaced by the MCT-backer aggregate.

Problem 2 can be fixed by simply having a slanted blocker (preferably simple objects --> mission specific --> Mo9 --> window blocker) that makes the drop more of a ramp.

EDIT: Like so

It's probably easiest if danpaul does these since he's already in TT. Thanks for the help though!
