I have a G5 Laser Mouse from logitech

my left click buttons getting stuck I notice it during ren where it wont stop shooting

I would clean it but idk how since the cracks are so small NOTHING in fit in there to clean it
and theres no way to take it or open it up

got any tips?

Valentine wrote on Thu, 22 January 2009 23:28i gave you just about everything you needed right there.

Some pages said take it apart, some pages had no answers, the rest rather did not give info for a mouse but something else

Im trying to find out if theres any tips you guys can give me from FIRST HAND EXPERIENCE you know maybe something you wont find on the internet

Do not take it apart! I had and still have the same problem. I tracked the problem down to the logitech software. If you disable it, I bet you don't get the problem anymore. However, then you can't use any of the preconfigured buttons anymore. Update the software doesn't help.

My advise: get used to it. I find it an advantage rather than a nuisance. When it gets stuck when I'm in a tank, the tank will keep shooting without having to press with my finger. If it gets stuck while repairing, it's even better. It's only annoying when it happens when you're throwing c4, really

I hope that's it, It only does do this during renegade, Maybe, TOMmrow When i wake up im
uninstall the software and set it all back up again and see if it works, damn setpoint

You don't need to uninstall setpoint, just close it and test.

Try to blow some air underneath the button, most of the time this will get rid of the dust or whatever is underneath the button (I don't think I want to know).

I have this problem, and mine is only a few days old from brand new. I don't think the mouse itself is defective, it only does it in renegade.

EDIT: I also have the G5 mouse from logitech.

I used to get the same problem with a £10 cheapo Logitech mouse years ago, and it was the

Setpoint software causing it. Uninstalling Setpoint solved the problem, and since the mouse didn't have any fancy buttons to configure I had no need for it anyway.

I guess there is some sort of incompatibility between Setpoint and Renegade, as I never noticed the issue with any other game, but it may also affect other things I guess...

I also now use a Logitech G5, and I get this problem. I have never used the Setpoint software, yet it still happens. I didn't have this problem when I had my Logitech MX-1000, so maybe it's just something weird with the G5. However, with the MX-1000, I used the USB-to-PS2 adapter (but the G5 doesn't want to work at all when I use one of those), so maybe Renegade just doesn't like getting its mouse signal from a USB port. Anyone else having problems with a different Logitech USB-only mouse?

My current mouse is a Logitech MX400 connected via USB and works fine with Renegade using the default Vista drivers. I have never installed Logitech drivers or the Setpoint software on this machine, can't be bothered fixing all the problems it causes.

I have setpoint with my MXRevolution and have never had a problem (knock on wood).

If it is a physical problem SMALL amounts of rubbing alcohol will help clean it out. The key it to make sure it has had enough time to %100 dry before you give it power again.

but im not sure I only notice it stick DURING RENEGADE :S

Setpoint interferes with normal mouse functionality regardless of whether you have special key functionality defined or not. Disable it and see if it makes a difference, you can easily turn it back on again afterwards.

I'm using a cheapo MS USB mouse and I get the same glitch some time.

Possibly to do with USB? (Can't see why, if Renegade gets its input from Windows Messages...)

Edit: Oh, this is really a tech support topic. Moved.

Lol had trouble finding it...either ways I dont know how this jsut started when never happen before

I cleaned out the buttons best I cant (im try better since paper edge kinda not good enough) and see if it works

Really I do not think it is caused by the mouse buttons "actually" sticking, it's probably caused by USB mice.

Will ya finally do what I told you to do in one of the first replies? It's setpoint causing it, nothing else.

Anyone else having problems with a different Logitech USB-only mouse?

I have even checked Add/Remove Programs and my registry, and there is no trace of any Logitech and/or SetPoint software in either of those places. Either it's a USB Mouse problem, or something's messed up with the G5 firmware, because my G5 had the sticking problem in Renegade since the day it came out of the box. What really sucks is that it won't accept my USB-to-PS2 adapter that I borrowed off of my MX-1000.
