Need a script for my release:

A vehicle preset (Submarine) should be able to dive, but not to fly!

Submarines/Naval units are VTOL-vehicles with grav=0.

should not be a problem.

- give the script the max. allowed heigth
- attach to the sub
- the script has to check coordinates all the time and stop vertical movement, if max height is reached.

possible?

would be a better solution then making the water as vehicle colission and use half-size-worldboxes.
