Could you name the new scripts "scripts.dll" and not "Scripts.dll"?

All lowercase please

All lowercase please

uhhh?

1. Why?

2. Why can't you just recompile it and specify the output to "scripts.dll" rather than "Scripts.dll"?

Yeah... all you have to do is right click it and click rename, I rename it scripts_jfw.dll each time so it will work with my multiscripts loader.

[F2]

([F2] = rename)

Be best to rename it.

Can anyone come up with a good enough reason not too? no.. so stfu since 98% of the .dll files in Renegade are in lower case.

It's just for looks. And 4.0's dll files are (and have been) lower cased.
