Hi.
Id like to optimize my renegade gameplay by changing my Aim icon and potentially some other stuff.
However, I got this Winrar with Renegade Addons and skins from Filefront (see screenshot) but I dont know how I make these files work. There was no explanation with the winrar, only a notepad saying its downloaded from www.jelly-games.net/.
Anyway when I want to download skins from jelly I cant reach the skins or im to stupid, not sure .
Any help?

Thanks.

You have to unpack the .rar in your data folder. In this case only the .dds file is needed to be put in the data folder.

ys skin files and model replacements (dds,w3d etc) all you do is move them to data folder done

winrar is just like .zip and etc its like a file that holds as many files compressed inside you just extract them (move/copy) where ever you want which in this case is your renegade data folder

do you know where that is?

isn' it www.jelly-server.com? :/

Also, work on your topic naming..lol I "Aim Mod" can be interrupted for cheat discussion. :/ You really want a custom reticle right?

If so, Click here and you can download DeathLink's Reticle pack. Or, here and browse some more Reticles.
