Is it possible to place a beacon on a friendly vehicle? And then drive the vehicle to the enemy base to explode a building? Like a demoliton truck... Is that possible?

I've already tried, the result can be quite useful, but no you can't drive off with it...The beacon just floats ion mid air click Floating Ion Beacon for a screenshot

alot of people slag off the idea about the prox mine carbomb, but personally i think its a good idea. but only if you have a very sound defence. ie, never do this trick in maps without the AGT. you need all the mines for your base
