Ok i used to know how to do this but forgot.

i need to know how to take a moded map like canyon and mod it and host it on my server so other ppl can play with me without haveing to download anything.

I have named it the same as cayon i have put the lsd ldd ddb files in my server data folder and still nothing.

When i make it into a mod it works.

You mean like add stuff and etc with presets?

or a whole new model change?

if its the first one open the level edit files in level edit and do your editing with the presets but cant add anything new only use whats there then save the lsd and ldd file and overwrite the old ones in the maps mix files

---

Ok here is the problem.

I edited canyon put ob guns on it edited the eng's.

now i save it as C&C_canyon i think it might have to be c&c_canyon i don't remember.

but anyway i put the lsd and the ldd in my server data folder, also tryed my data folder.

but nothing happens..

Make sure you save your presets too and grab the objects.ddb file also and drop it in your server folder.
