Since I updated to Vista, Renegade doesnt save my XWIS password and location to the registry. But the nickname IS saved.

Every time I logon I have to type the password manually and select the location.

A solution?

I tried to run the exe's in admin mode. But with that, it doesnt use ANY of the registry settings and run the game in 640x480 and more strange things....

ok, tested again.

if you run the game as administrator (and the configtool as admin before), it saves all information.

but if you run it as a user, it doesnt save password and preferred server....
