While in LE, edit the Walk-thru preset under Objects->Soldiers and change the secondary and primary weapons. Now go into walk through-mode (F8) and enjoy!

Note that the projectiles do no damage and they will stay on the map until you re-load it. Slow-projectiles (eg rockets), c4 and nukes freeze in mid-air. Some projectiles only show up when you fire in first-person mode.

You can actually paint decals onto maps and export them into renegade. The decals wont show up in LE but they will ingame, however how many appear is determined by the user's ren quality settings and they will disappear when you create your own bullet-holes.

One question for the W3D gurus - when pressing alt-fire (right-click) the 'C4 mode' changes between 1,2 and 3. What does this mean exactly?

Its switching between proxy, timed, and remote detonation, which is a setting that is set under "Ammo Type" under the Ammo (projectile) preset.

Yes it is possible but I would not use it as such. Try taking a laser chaigun and shoot around after a short while LE will crash. (Set yourself as a gunboat or A-10 )

Hehe I see you made two terrains into one. (Complex and City)

You can set yourself as vehicles? How?

I tried deleting the Walk-Thru preset and then adding a new preset under the vehicle-tree, but LE just crashes when I try and enter walk-through node
