That's what it should say!

You're on your own!

Kidding.

Go to: Start -> Run -> "Cmd". Press OK.

Type "ping c.xwis.com" and tell me what it says.

pinging to c.xwis.com [98.129.126.138] with 32byte data:
Recall from [98.129.126.138] and byte and some time
it goes to fast to read ;\

Right. This makes no sense.

You can get to the server that holds Renegade's listings, your account is valid and not banned, yet blank page.

I'm all out of ideas.

And you may as well delete all the other cheats you installed.

Similar problem, no objects or anything. I do have ALOT of skins and many of them are models, but i know for a fact that that shouldn't do anything. I have GPS HUD that needs to have a modified shaders.dll, but i tried without it and it still didn't work. I'm playing with files i've to my knowledge always had just not all together at once in the past. Any random idea's on the subject?
