When I open BrenBot no messages are displayed, and the same happens for BRloader. I had BrenBot working for a while and I am not sure how it broke .Can somebody help please.The FDS runs fine, and no I am not intending to run this as a server, as it will obviously fail, I just need to know how to use BrenBot.When i reinstalled BrenBot it still refuses to work.I have configured all the .cfg and .ini files correctly.SSGM and BIATCH seem to be working fine, and I downloaded them with BrenBot.

sometimes if u want to be able to use things how you want its better to do it yourself brenbot has many problems and bugs, this is one ive had before see if the registry data for it is okay for it.

If BRenBot has problems or bugs you should report them. To date I am aware of about 3 bugs with the 1.52 version, all of which are extremely minor and do not affect it's main functionality.

As for this problem, this is a PAR problem, not a BRenBot problem. PAR is the packer used to combine all the BRenBot code files into an exe file, and it sometimes goes a bit wonky, and this problem usually happens when the PAR cache becomes corrupt.

Delete the folder 'par-<your_windows_username>' in the following location;

XP: C:\Documents and Settings\<your_windows_username>\Local Settings\Temp
Vista: C:\Users\<your_windows_username>\AppData\Local\temp\

(NB: For both of these the folder is hidden, and you will need to either type the address into the address bar or set Windows Explorer to show hidden folders.

OK, glad to have helped.

Note to self: I should really put that into the troubleshooting section of the readme sometime...
