Saberhawk showed me a tiny bit of the graphics improvements he's working on for TT's upcoming patch. This includes vastly improved water and scripts.dll 4.0's fix for widescreen monitors. You can click on the images to make them larger in accordance with forum rules about stretching the screen.

i have one question:

Water from Islands doesn't have bump maps effect (other maps like singleplayer do) so, that mirrored effect only for islands? or its for all ingame water?

Subject: Re: TT TEASER! - water rendering and widescreen fix
Posted by [Gohax](#) on Tue, 14 Apr 2009 09:34:08 GMT
[View Forum Message](#) <> [Reply to Message](#)

Probably all the water, wouldn't make sense just to make an improvement for one map.

Can't wait for the release though guys. Looking good

[View Forum Message](#) <> [Reply to Message](#)

And here comes the advantage question: ()

How exactly does the widescreen fix work? As in, does it widen the FOW for people with widescreen monitors? Since there're a few ways of doing this and even though the difference is somewhat small, having the right aspect ratio screen gives you an advantage over others.

The solution would be to have the "area" you see to be constant (more technically the solid angle should always be the same). I've made a few quick images to show what I mean.

<http://img16.imageshack.us/gal.php?g=43issmaller.jpg>

SO in practice, people with widescreen would see a bit wider image, but people with 4:3 screens would on the other hand see an image that's taller. Hope that makes sense.

Anyhow, looks great. Keep up the good work!

MGamer wrote on Mon, 13 April 2009 21:04it looks good compared to the old water but actualy it looks more like chrome

I did what I could to modify C&C_Islands to support this shader enough for reflections, but for the underwater/color support to properly work the level needs a *good* underwater scene, which Islands does not.

Hitman wrote on Mon, 13 April 2009 22:01are there going to be alot of upgrades to make renegade look good? and maybe a curved surfaces option

"Curved Surfaces" requires hardware support as it generates *alot* of new polygons for certain meshes (in Renegade, that would be the player models. Around 99% of video cards don't support it in Direct3D 8, and even less in Direct3D 9 (which is what Renegade is using now). Sorry, but curved surfaces just won't happen.

SSnipe wrote on Mon, 13 April 2009 22:18Im guessing you need good video card to view this

You'd be surprised. This effect requires a SM2-capable video card, which means GeForce FX series and above on the NVIDIA side, and Radeon 9500 - X600 series and above on the ATi/AMD side. This doesn't mean it'll run blazingly fast, but it'll run.

madrackz wrote on Mon, 13 April 2009 22:58Very nice , egh from now to friday im not at home (work)

Can you get something to make Textures will come out much cooler? just like in the new Games somehow

And thanks Crimson now i know how to make Thumbnails lol

Which textures, and what do you mean by "cooler"?

Gator wrote on Tue, 14 April 2009 04:14i have one question:
Water from Islands doesn't have bump maps effect (other maps like singleplayer do) so, that mirrored effect only for islands? or its for all ingame water?

Sadly, there isn't one specific water material that's used on every map which this shader can override. Each map needs some work in order to support this shader at all (be it in reflection only mode, or "full" mode)

RTsa wrote on Tue, 14 April 2009 06:07And here comes the advantage question: ()

The widescreen fix corrects the aspect ratio of the built in Camera code. Before, it was always initialized at 4/3, and now it's initialized to W/H. The HFOV/VFOV code itself wasn't modified and remains under control of the main battlefield camera (which is controlled by cameras.ini)

It's possible for it to be applied to any map, it just needs artist intervention. I put it on Islands because that was the easiest one for *me* to do. Islands still needs alot of work on the underwater portion and it's VIS settings in order to fully support this shader though.

SSnipe wrote on Tue, 14 April 2009 16:18very nice work saber, whats the min type of vid card that can run this soothly....I have onboard nvidia geforce 6150 se 430 nforce

You buy any card thats around 50 - 60 bux and you should be ok, what u have now was garbage when it came out tbh.

Many places still carry older used video cards without the boxes + manuals and stuff so they're fairly cheap. Just the other day I saw a radeon 9600XT (if you have an AGP mobo that is) for 25 bux. Just look around your area, ask a few ppl and you should be able to find a cheap card that can actually be called a graphics card instead of the onboard shit.

Nice work.

Perhaps because it couldn't before....

What I meant was I am suprised that the TT dev can get so much out of the old and (fairly) broken engine.

Wait, are you suspecting that this is the higher end of what we can do?

Wait, so you can top doing water that rivals the water from recent games?

Anything graphical, models, textures etc can be changed in the engine quite easily. Renegade doesn't support water reflections *at all* so this is all added in.

The only thing that isn't easy is actually coding the effects

of course it is going to be worth the wait. we have nothing else to wait for but im not going to get my ballstick out (like the rest of you) for a screenshot of water in a game that will always look like ass.

i just hope that the potential fix against cheaters and map downloader hasnt been delayed because of a bit of unnecessary bling.

1, people working on 1 part of the patch (ie the graphix) are not responsible for the anti cheat part of it, so they're working in tandem, NOT on 1 thing at a time, that would be retarded... use your head plx

2 this unnecessary bling, as you put it, is what is going to bring new players to ren, since most of the gamers are retarded and go for looks over gameplay, but once they realize ren is teh pwnage game they will hopefully stay. Again use your head plx.

oh and, *insert bashing comment here* asshole. :/

The problem with updates of any sort is that if a feature isn't finalized and we discuss it (or show screenshots for that matter) then it's pretty much 'set in stone' and we can't do major updates to it anymore otherwise we'd disappoint anybody who wanted it "exactly the way you had it in the screenshot."

You first make "stock" water (aka water that'll appear if shaders aren't supported). On that water, you add a few (new) mapper arguments that tell it to be disabled if a certain shader is support. Then you create the new water plane with regular unwrapping and add a few other mapper arguments (like "Shader=<shader name>") to actually set the shader and do a bit of other needed magic to turn it off completely if the shader isn't supported. Then you hook up some other entries in other files and you are good to go.

TexCore wrote on Thu, 16 April 2009 07:15i will made new cool looking not repeated water texture for that , ofcourse after Tiberian Technology's script 4.0 is came out (p.s. on that teaser screenshot you can see "water's repeated texture...") i hate that

The water shader hasn't been tweaked for Islands yet (and in any case, the "water texture" is a very complicated math equation encoded into a texture and is not something to be editing).

Don't be. Even if you could easily edit it (and still have it be correct), it's effect is barely noticeable on the shader's output.

We're working on some other updates for you. I just wanted to get something out there for you guys. Unfortunately I can't show you a screen shot of anti-cheat stuff, but whenever the team shares something that you can see and appreciate, I'll share it.

Many of you guys don't understand what a massive undertaking this is. Many parts of the engine are being recoded from scratch. We think it's important not to lose the "look and feel" of the classic Renegade we know and love. Subtle things like the distances between buildings, placement of certain structures used for cover. We don't want to lose those things. We just want to make the current game work better, with as few bugs as possible. (Hopefully no bugs, but that could very well be a pipe dream)

We are trying to achieve the perfect compromise between those who oppose change and those who don't and make you both happy.

ah, then something more (say if I to far away from the topic)
when I would make a plane then, I could use the shaders to make "water" of it, but also to make a "mirror" ore "exhaust famues" of it. I assume that happens on the material name assigned to that plane?

For backwards compatibility purposes, it likely could (the shader would need a "UsesMaterialNameAttachment" or "UsesTextureNameAttachement" flag set to true on it.) The proper way of attaching shaders in scripts 4.0, however, is to set the "Shader" mapper argument for the material. The mapper arguments is where you put things like UPerSec, and VPerSec. Attaching shaders this way allows them to bypass the name lookup entirely and put far less stress on the CPU.

Stefan wrote on Sat, 18 April 2009 11:39Does this mean the map has to be rendered twice? (ie; moar lags)

Yes, but that's nowhere near as expensive as you think it is; physics are only simulated once and that is what causes the most lag. I've had this system render the map 5 times over without a major drop in FPS.

The reflection looks great; my only concern is that in some angles, it looks very tiled. Not so much when you're standing close to the water, but when on a higher plain looking into the distance, it looks a lot like the water is a bunch of squares. Is there any way to make it look smoother therein?

I don't know if you're trying to square up to SaberHawk, but if you are at least know what you're talking about before you do. It is extremely -easy- to add a bloom effect, so you should stop trying to show off your e-penis.

I've also never had any frame-rate drop with 3.4.4 + bloom.

I think the 0,0 thingy was already discussed elsewhere, but not sure. As for the outside PT's, its a bit of an annoying subject. Problem is taht on certain maps (like field) it mighht unbalance gameplay since GDI players would need to walk alot further for a PT from the most used beacon sites. Currently we have not fixed them AFAIK.

Don't remember for sure, but I think people agreed it'd be best if the server owners would be able to put that fix in or leave it out.

But true, it's a pretty big balance issue. Nuking the back of barracks would become so much easier on pretty much all maps.

That's some nice work there.

From that screenshot it's almost of the same quality as some modern games.

If only I knew this sooner though, Chronojam had me work on a 3DS-made water effect for APB which did take some hours from me.

But, I have some questions.

If I would create a wave animation (mesh, WWskin), would the shader still work properly?

How does the shader react to collisions? If infantry walk through it, does it add splashes?

And did you have any problems with particle effects not rendering either in the reflection or directly through the mesh/shader?

And, mostly an extra question, but if you put the camera right in the middle of the mesh so you look at both the water surface and underwater, does the shader make any changes to the underwater part?

Keep up the great work!

Oh and, to be honest... I think the water in that Renegade X screens looks ugly as hell. But whatever, good luck "killing Renegade".

First off, Fobby is going to see your post and have a fit. Why? Because that was completely uncalled for. He has said so, so many times that Renegade X's goal is not at all to kill Renegade. He being a longtime fan and member of the Renegade community, I think it's quite easy to believe what he says.

No, it's fine. People are entitled to their opinions, whether right or wrong, and I respect that. Some people may not like our mod, but that's not the subject of discussion. I personally love what Saberhawk and the TT team have done/are doing, such as the new water reflection system. I will enjoy a fixed and prettier version of W3d C&C Renegade.

Now, back on topic

Maybe you had taken our April Fools video too seriously?

In all honesty, I have no hostile intentions whatsoever. In the past few years, I have contributed to W3D via:

-C&C Reborn; as a sound artist and for a couple months, the leader of the project.

-I and my former Renegade Revived team helped contribute models to the ApocRising team when they had started off.

-I and my clan had contributed servers for C&C Renegade

-And as a general long time member of the C&C community

If anything, I and many others in the Renegade X team have greatly contributed (and continue to contribute) to the W3D engine. And, I have always been a fan of this TT project; I verbally support it on these forums and my own, as I have known a few of its members for a long time, and I look forward to its release.

Quote:I didn't read Fobby state anywhere that he has less hostile intentions

I have. Many times.

Quote:
he just made videos and didn't released anything...

Can you honestly say you are any better, Scrin? I'm not going to release anymore assets to a mod that isn't done. Though we have released Hourglass and our music collection. Just wait for a release, it's not very far off.

Now please, save any compliments, rants, raves, insults, etc. for a Renegade X-related thread. This thread is about Saberhawk's new reflection feature, which is great, and I only expect it to get better.

Sorry Fobby, I guess I might indeed have taken that video a little serious. And I personally never saw you say anything about it after that.

The reason I even mentioned it though was another member of your team posting and saying "your" water effect is beter, which kind of made me pull the trigger.

Anyway, let's get this out of this topic. I would still like some answers if possible to the questions in my first post.

But, I have some questions.

If I would create a wave animation (mesh, WWskin), would the shader still work properly?

For purposes of reflection plane guessing, the shader uses the top plane of the bounding box of the mesh. Using animations on any plane with this shader would definitely give you undefined behavior.

Naamloos wrote on Tue, 21 April 2009 18:48

How does the shader react to collisions? If infantry walk through it, does it add splashes?

No collision detection/reaction on it *yet*

Naamloos wrote on Tue, 21 April 2009 18:48

And did you have any problems with particle effects not rendering either in the reflection or directly through the mesh/shader?

Could you be more specific? The reflection system reflects *everything* that's above a plane, including dazzles, particles, rockets, etc

Naamloos wrote on Tue, 21 April 2009 18:48

And, mostly an extra question, but if you put the camera right in the middle of the mesh so you look at both the water surface and underwater, does the shader make any changes to the underwater part?

Not yet.

Quote:Could you be more specific? The reflection system reflects *everything* that's above a plane, including dazzles, particles, rockets, etc

I was trying to ask if you had any problems with Zbuffer or static sorting with this shader. For example if you placed an object with static sorting in the "underwater" area, would it have problems displaying when looking at it from above the water surface?

It's a bit of a known issue that Zbuffer and static sorting can behave like this... So I was wondering if you had any problems like this with your shader?

don't know if you noticed but most "gamers" (emphasis on the "" marks)look at graphics then
game-play.. this would bring new players to ren, instead of them just lookin' at it and sayin'
"LOLOMGOMG THAT LOOKZ LIKE NINTENDO GAMEZZZ IT PROBABLY SUX BIG BLUE
BALLZ LOLOOLROFL1"

the fact, that Renegade still is one of the best games game-play wise, makes me sad that there is
so few players left.

the fact, that Renegade still is one of the best games game-play wise, makes me sad that there is
so few players left.

its because very easy to kill free soldiers from apc/apache/orca (and easy to control that vehicles)

this is not "gameplay" its key config script (i want to see what happened if ren will uses Crysis's tank's control feature...)

p.s. i dont know about others, but i played this game because its fucking easy to control vehicles/soldiers and kill/death engine is easy as hell
Nothing rare here, this game is crappy and out of date, and im gona put that damned ren CD into microwave....

Well Scrin that makes perfect sense of why this game is best gameplay wise. Who the hell would want to spend hours learning how to drive a tank? Manuever around with a soldier or anything? When with Renegade, you can buy the game and be able to learn how to move around in a tank and control your character very easily.

This also isn't just about tank/character movement. It's also about strategy and teamwork. This game requires a lot of it. Most other games don't :/

I guess thats the reason why im not so much into the newest games as when I start playing them I spend ages learning how to actually control and get bored.

Exactly how I felt about Battlefield:BC. Waited months for it to come out, took me forever to learn how to control the heli and tanks. And when I finally did, I was bored of it :/ Been playing Ren for years and yes it does get boring sometimes when you have idiots on your team that don't know wtf they are doing, but when you're playing as a team, it can be very fun.

That is why the team is working so hard on the TT patch. The graphic improvements are only a part of what's being done. You will greatly appreciate the new anti-cheat methodology and the improvements in netcode. We are striving to keep the gameplay that you are used to and just removing the annoying bugs. We are also including a "resource downloader" to allow the server to designate any modification or custom maps they would like you to have in order to play and you can download them automatically. This should provide a great burst of enthusiasm to the modding community because their projects will see a much larger audience!

Didnt TT fix the LOD system already?

Also there are more things that have been created which could be usefull for TT. Like high pollied 3rd person weapons or extra vehicle shells. (Like broken down artys etc)

God help us all. Unless you are verifying that the resources being sent are legit MIX, Images, or Sounds you are gunna have virus problems.

You could easily rename a virus.exe to kittens.mix, send it, and kill us all.

JPEGs can easily be verified just by the way there hex addresses are, IDK about mixes though (maybe like MP3's which are close to random)

Theres my 4 cents.

[View Forum Message](#) <> [Reply to Message](#)

Quote:You could easily rename a virus.exe to kittens.mix, send it, and kill us all. virus.exe will do absolutely nothing until it is executed though; and it won't be. You'd need to write a very specific exploit to abuse the map downloader to send viruses, and that's not easier than writing an exploit for one of the many other bugs in Renegade that could potentially allow remote code execution. (It's quite likely harder).

Not at all. I have seen malware execute from the caching of an icon. I bet Roshambo can back me up on this since he told me once that just having a virus file is dangerous since some find ways of executing by themselves.

I bet Roshambo can back me up on this since he told me once that just having a virus file is dangerous since some find ways of executing by themselves. That's because of a bug in the icon loading code probably; point is that the same thing can be done by ending malicious network packages. The downloader will not make the risk on a bug being exploited higher.. You'll need to write a specific exploit to a specific bug in either the downloader or any other Renegade code, which part you choose does not really matter much. It's not as easy as renaming virus.exe, just like it's not as easy as just sending the virus.exe over the renegade network connection. Tricky exploits are needed to make it execute.

When sending files from an untrusted source (some n00b's modded server) we should be a little more care full than just thinking that it would be 'too hard to put a virus in there.' You can easily validate many files by what there hex code starts off with, its almost the same every time... especially for jpegs.

It would be a simple addition to the downloader.

Lets not go into a 10 page topic about this... just keep it in mind when your coding it.

[View Forum Message](#) <> [Reply to Message](#)

Reading the first few bytes of a file is probably the worse way of checking for a virus. There is also very little chance a server owner will be able to send anything malicious. You're free to try all you want though

We obviously thought about whether there would be any vulnerabilities; however came to the conclusion that it's not easier to exploit the downloader than it is to exploit renegade itself.

Downloading files may sound risky, but it really isn't much different (in exploitability) from what Renegade does all the time: download game state information from the server.
