I read somewhere on the C&C Wiki that Westwood released high-res models for the public to use.

I assume that it means that Westwood allowed people download some high-poly models. What are the models that had been released? Orca? Pyradon flame tank? Ion cannon sattelite seen in TD's FMVs?

Thanks for the response.

Download it here. It was released here on RenForums by Gen_Blacky. Idk the link, I just found the download path in my download history. It's a library of just the weapons. If you want everything HD, get UT3 and download the Renegade X mod.

so I believe I'm gonna get flamed for revealing my source:

http://en.wikipedia.org/wiki/C&C_Renegade#Development

Quote:However, a software development kit (SDK) was released by Westwood Studios so that users could add their own content to the game. The studio also released a number of high-resolution models to the mod-making community, including some from the Red Alert games, particularly the second.

They're talking about the Renegade 2 models. They aren't setup, nor are they all textured.
