Is there a better way to create nice buffered alpha blend layer around detached items like tib fields? I did the textures in RenX and used the Vertex pain tool.

It looks okay but when I go into LE it sucks.

So how can I perfect my technice and do this better?

I see you use red paint to paint on the meshes?
When you use black paint with opacity 100 it will look way better.

<http://renhelp.net/index.php?mod=Tutorials&action=view&id=21>

This tutorial has a nice section on alpha blending.

So there is not way to paint the meshes with a smaller brush? Everytime I use the vertex tool for the paint it always messes up and someway paints the whole mesh.

create more polys. It paints the vertexes , the more vertexes u have the smaller the spread you will have.

So like I have my tibe filed which has like 10 polygons then I tessellate it with like 180 and then try vertex paint?
