readme:

Quote:

This is a plug-in designed to work with SSGM2.02 for cnc_renegade.
It was written by reborn from MP-Gaming.COM (fm_reborn@hotmail.com).

This is a first release version and probably has some bugs in it, with feedback I will fix bugs found.

This plug-in is based on the system first created by black-cell. However, it has been developed to be configurable for server owners so that they might set it up in a unique way for their own server. The plug-in allows the following to happen: There is a lot of information following, but you should also check out the commander.ini for details on each setting.

.....
.....

Vote in a commander for your team. usage:

!PollCommander;!pollcommander;!POLLCOMMANDER;!Pollcommander;!VoteCommander;!Vote commander;!VOTECOMMANDER;!votecommander;!PC;!pc;!Pc;!VC;!vc;!Vc

Then the player name. For example:

!pollcommander reb00b

The name does not have to be the whole name either, there are a lot of players with stupid ass weird names like: "o0angelx-x1!\!1||!", to type their name would be a pain in the butt.

In this instance you could type:

!pollcommander angel

And it would still work, as long as "angel" was not a substring of someone else's name.

This will then start a vote going, team mates can then either !vote yes or !vote no. The amount more yes votes than no votes needed is configurable in the commander.ini file.

.....
.....

voting for a commander. usage

!poll;!Poll!POLL

Then your answer, yes or no. For example:

!poll yes, or !vote NO would be acceptable, but only when a vote is occurring...

.....
.....

Check who your team commander is. Usage:

!Commander;!Commander;!COMMANDER;!TC;!tc;!Tc;!TeamCommander;!TEAMCOMMANDER;!Team commander

If there is a commander for that dudes team, then it will tell them the commander name, if not, it

will page temm with instructions on how to start a vote.

.....
check the team fund. Usage:

!teamfund;!TeamFund;!TEAMFUND;!TF;!tf;!Tf;!tF

This pages the player what the current teamfund value is. The team fund is controlled by the team commander. It can be used to distribute money to other people or used to call in supply drops. If you run the base defense plug-in, it could be used for that too... The server owner can also configure a trickle to the team fund to, at defualt it is set to increase on it's own by ten credits every ten seconds. But this is subject tot he server owners change.

.....
donate to the teamfund. Usage:

!TFdonate;!tfdonate;!TFDONATE;!TeamFundDonate;!teamfunddonate;!TEAMFUNDONATE;!TFD;!tfd

Then the amount to donate, for example:

!teamfunddonate 500

If I have 500 credits, then I would donate 500 credits to the team fund.

.....
healing_aura

The team commander gets a healing aura (can be toggled off by the server owner in commander.ini), this aura heals near-by team mates and there vehicles.

The strength of the aura, and the area of it's effect is controlled byt he server owner in commander.ini

.....
donating the team fund to a player, useage:

ONLY FOR COMMANDER

!tfdonateplayer;!TFDONATEPLAYER;!TFdonateplayer;!TFDonatePlayer

Then the player name and the amount, for example:

!tfdonate reb00b 500

If there was 500 credits in the team fund, and player reb00b was on the commanders team, then he would be given 500 credits from the team fund. This command can only be used by the team commander. the name of the player works the same as the votecommander command, i.e you only have to type part of there name

.....
ordering a supply drop, usegae:

ONLY FOR COMMANDER

!Supply;!SUPPLY;!supply

The team commander can order a supply drop, a chin00k drops off a box at there position. At default it costs 500 credits, but this is controlled in commander.ini for server owners to change. The supply box will grant a refill to whatever player picks it up, and will refill the health and armor of any tank that picks it up.

The supply can be called in an infinite amount of times, but the server owner controls how often you're allowed to call in it in the commander.ini file. Once every x seconds...

.....
.....
blocking the harvester, useage:

ONLY FOR THE COMMANDER

!BLOCKHARV;!BlockHarv;!blockharv;!BlockHarvester;!BLOCKHARVESTER;!blockharvest;!bh;!BH;!Bh

The commander can block the harvester with this command. He might do this when the enemy holds the field for example.

.....
.....
un-blocking the harvester, useage:

ONLY FOR COMMANDER

!UNBLOCKHARV;!unblockharv;!UnBlockHarv;!UnblockHarv;!UNBLOCKHARVESTER;!unblockharvester;!UnBlockHarvester;!UnblockHarvester;!UBK;!ubh

The commander can un-block the harvester at any time with this command. If his team re takes the field for example, he would obviously want it to return to normal duties.

.....
.....
finding out the commander abilities, useage

ONLY FOR COMMANDER

!abilities;!ABILITIES;!Abilities

When the commander is voted in, he is paged telling him he has extra abilities and typing !abilities will tell him about it.

If he does type !abilities he will be paged with such info, because there are allot pf people who will forget the syntax or even what they're capable of.

.....
.....
Advanced c4 message, useage:

ONLY FOR COMMANDER

!c4;!C4

This is the same as the normal !c4 command, however when the commander types this, he is paged additional infomation about the c4.

Specifically what building they are placed closest to, and how many of them.

.....
.....
Ordering your team, useage:

ONLY FOR COMMANDER

!order;!Order;!ORDER

Then your message... For example

!order Defend the hand of Nod guys

This would then page every player on your team "The team Commander orders you to: Defend the hand of Nod guys".

This is an important command for motivating your team...

You could for example do !order Buy flamers for flame rush, is excellent for setting up plans and controlling the team for better team work.

Checking the status of the harvester, usage:

ONLY FOR COMMANDER

!hstatus:!HStatus:!Hstatus:!HSTATUS

This will page you the health percent of the harvester.

Proximity mine disarming aura usage:

Proximity Mine Disarming at ONLY FOR COMMANDER

ONLY FOR COMMANDER
The team commander (if the server owner has it enable) will be granted a aura similar to the healing one, however this one

disarms enemy mines near him. The area of effect is determined by the server owner.

As well as these commands, you will also be paged warnings about the health of your buildings and harvester should they fall below 50%.

This might be a good time to use the `lorder` command to get team mates to repair and harvesters should they fall below 50%.

If on the next map the commander from the previous map is still on the same team he will carry his command over. If however he is teamed to the other side

he will lose it. This is to encourage the use of the commander as much as possible.

At present, a player can start a poll for himself to be the commander, this isn't really in the spirit of team work, however it may make more use of the

team work, however it may make more use of the commander as players tend to be inherently selfish, hence the need for such a system. I may in the next version not allow them to start a vote on themselves, or perhaps let the server owner choose.

I don't run a renegade server, I have no real use for this plug-in and have made it for the sole

reason to help other server owners.

If you use this plug-in and modify it, if you see a problem, either tell me, or preferably submit code. Don't be selfish, release the source code.

I believe it is only with this attitude that Renegade will continue to keep it's diminishing player base.

I really mean it, this thing took me quite a while to write, and if you're reading this, then I did it for you. So if you modify the source code and add your own code, then release it.

To use this plug-in, refer to SSGM.ini in your SSGM2.02 server folder.

You'll need to add the .dll to the server folder, and make an entry in the [Plugins] section, mine looks like this:

[Plugins]

01=commander

You'll also need to add commander.ini supplied to your SERVERs directory. This is where you can configure all the settings for the commander system.

You'll also need to place NOD_Supply.txt and GDI_Supply.txt in your servers DATA folder too.

Please note the emphasis of where

to place the .dll and .ini file, that actual server directory, as where the two text files for the cinematics have to go in the DATA folder.

I urge you visit my forums and my site @ MP-Gaming.COM. I would also like to direct you to Black-Cell.NET. There is a history of this game there that most people are oblivious to, and without Black-Cell, none of the feature rich servers we have today would be here. They also have a renegade server back up and running. Be sure to find it in the WOL server listings and join. It's hella fun.

[View Forum Message](#) <> [Reply to Message](#)

The plug-in was tested one three servers, one of them went live with over 30 players and they never had this problem.

There sole purpose was to test it for bugs and deliberately try to break it. It's very strange that you're experiencing this.

Can you provide concise detailed info in this please?

I cannot read crash dumps. I am un-able to. However, give me your msn and I will try and debug the problem with you tonight. This will require effort on your part aswell as mine.
Also, what other software is your server running? Any other plug-ins, perhaps renegade resurrection?

First, try running the server with nothing but the plug-in. If it still crashes then there is something

wrong and the people testing it need to run away and hide before I kill them.
However, if it doesn't crash, add the other stuff back one by one, then you have found the problem.

However, if it doesn't crash, add the other stuff back one by one, then you have found the problem.

The stuff he listed is all plugins for BRenBot and thus *shouldn't* affect the server... :/

Well, the dude hasn't got back to me at all, I tried recreating the bug on my own, but for the life of me I cannot get it to happen. I direct connected using his name. I wasn't sure if he was using "*DTzeiss" or "DTzeiss" from the message he posted, so I used both thinking possibly (although really really unlikely) it could be the "*" part of the name that was causing it.

Whatever I tried, I couldn't get it to crash.

Here's a movie showing it, although the movie only lasts a very short time, I tried for ages with various other methods to get it to break.

<http://game-maps.net/staff/reborn/noproblem.wmv>

Unless the dude gets back to me, I can only assume he was running some other software besides that of which he mentioned that caused it to crash. Everyone else using does not have this problem. Weird.

Hey reborn, looking good, few things though:

- Could you please stop the advertising when there are no players in the server?
- !hstatus didn't work for me
- The server didn't page me when my AGT was at half life.

This might be because I'm running a co-op server, I'm not sure though..

On a totally unrelated note: The veteral plugin isn't detecting bot kills aswell

Anyways: Thanks for this great release, love your work

You can disable the advertising of the mode (incidently to anyone else reading this, it doesn't advertise MP-Gaming.COM, it just tells players about the commander system and the commands etc etc) by turning it off in the .ini file.

However, you're probably right... Even if it is turned on, it probably shouldn't send those messages without anyone in the server. I will release a new version that does what you want it to do.

I will check hstatus, I may of been too reliant on the people testing in hindsight.

Was it only the AGT this happened to, no other building, just the AGT was broken?

The veteran plug-in wasn't designed to work with bot kills. I'm pretty sure it would be possible though with minimal effort if you need it to.

I was hoping people would pick up these plug-in's and develop on them themselves and re-release them with new cooler add-on's. The veteran plug-in specifically was released with this in mind and only had place holder reward systems.

As no-one has picked it up, I will return to it soon, re-visit it and make a 1.1 version that is better, I will make sure I include your suggestion but allow server owners to toggle that option.

Cool, thanks

reborn wrote on Wed, 29 April 2009 17:14 I will check hstatus, I may of been too reliant on the people testing in hindsight.

Aight, I'll try it again to ensure it.

reborn wrote on Wed, 29 April 2009 17:14 Was it only the AGT this happened to, no other building,

just the AGT was broken?

I only tried TeamKilling the AGT. It didn't send me a message.

reborn wrote on Wed, 29 April 2009 17:14The veteran plug-in wasn't designed to work with bot kills. I'm pretty sure it would be possible though with minimal effort if you need it to.

I was kind of aware of that, though as I'm not a coder at all I wouldn't have a clue to begin

reborn wrote on Wed, 29 April 2009 17:14I was hoping people would pick up these plug-in's and develop on them themselves and re-release them with new cooler add-on's. The veteran plug-in specifically was released with this in mind and only had place holder reward systems.

Like I said before, I personally don't have any coding experience. I think it's great what you're doing, releasing all your plugins.

For the record: The map I tested my stuff on was Skirmish00.mix. Maybe that kind of got in the way...

Reborn, Thanks for all your hard work man! I really really appreciate it

I've updated the download link on the original post to contain this link, here. It should of fixed the page problem you mentioned about buildings falling below half health. !hstatus worked fine for me, perhaps you was not the commander at the time? This update also means the explanation messages are not repeated continuously if there are no players in the server.

Since they're relevant to your veteran plugin and the commander plugin, I thought you might want to know of these bhs.dll keys.cfg entries (they might only be in the Black-Cell scripts package by default, and I'm not sure if CP2/scripts 3.x/RR have entries for them unless you make them yourself):

VetInfo=Delete_Key
RequestRepairs=Keypad_Star_Key
HarvUplink=Keypad_Slash_Key
SupplyDrop=Keypad_Period_Key

Dude, redownload. He already fixed that.

Also:

(18:34:26) (&PruCoop) DeathC200: !pollcommander DeathC200
(18:34:34) (&PruCoop) Initializing Westwood Online Mode

(18:34:36) (&PruCoop) Logging onto USA Server
(18:34:37) (&PruCoop) Creating game channel...
(18:34:37) (&PruCoop) Channel created OK
(18:34:38) (&PruCoop) Loading level Skirmish00.mix
(18:34:39) (&PruCoop) Level loaded OK

Server crashed when he did that, I've added you on MSN reborn.

I just found another command related to team commander that I completely forgot about. In BC, if there was no commander assigned and noone was successfully voted commander, a mod could !assumecommand.

True, but the plugin isn't connected to a server regulator.

I have no idea why its doing that. If you give me the crash dump I will see if a friend can take a look at it. If they can see why it's happening then I will try to fix the problem.
I wish I could read crash dumps to be honest...

if the player was a commander and changed teams it will still say that the player is the commander for that team he was originally on. The commander proxie aura doesn't work in 1.1, worked in 1.0 ,its set on in the .ini. When the agt reports damage it says the damage is like 5984565464

ExEric3 wrote on Tue, 28 April 2009 11:01It's incompatible with Resurrection.

But nice work dude.

I use rr works fine.

reborn wrote on Tue, 28 April 2009 13:23 Ah right, thanks.

That's pretty weird then, everyone else had no problems at all with it :-/

Zeiss, if you're around still in 4-5 hours from now catch me on msn fm_reborn@hotmail.com, I will try to resolve the problem.

hmm seems i got the same problem. server restart after using the tc cmd. so i install a new clear server and br 1.52. i add only the commander plug-in so it looks like this:

[Plugins]
01=BRenBot.dll
02=commander.dll

no other things added. what can i say? it crash again.

now the weird part. i test some maps and on non-flying maps, the server crash but on walls flying and city flying the commander plug-in works fine.

Ah, Dirk. Thanks for the info. Would you be so kind as to try making it crash without using brenbot.dll? If I can say for certain that brenbot.dll is causing the problem I am sure I can come to a solution.

Is everybody else that's experiencing crashes on the chat command also using brenbot.dll?

Subject: Re: [Plug-in] SSGM2.02 Commander BETA

[View Forum Message](#) <> [Reply to Message](#)

i test it without brenbot.dll and it crashed

[Plugins]

01=commander.dll

i run my server on win2000 so think that can be the problem but after i check a installation on vista, i know it its not the OS because i got the same error.

so i have no clue what it is.

I use brenbot 1.52 with whole bunch of plugins for it, i use ssgm and rr and a whole bunch of different plugins one of them is brenbot.dll and it has never crashed my server yet.

Reborn when any building is at half damage its says its like 58567507546 damage. I got the aura proxy to work i just recompiled it and got it working.

I think peoples server might be crashing if they have a modified scripts.dll i always have plugins crash the server if the scripts.dll is modified. Thats why i just add everything to plugins.

that would be a reason but i change or edit nothing.

the language of the system, can that be the problem? i mean zeiss use german system, a other guy who test it on his system and me, we all use german windows. (on zeiss not sure) maybe there is a dll involved where the language is incompatible with this script. ok call me n00b for this, i have no idea about this but maybe its a reason.

Subject: Re: [Plug-in] SSGM2.02 Commander BETA
Posted by [reborn](#) on Fri, 08 May 2009 21:18:18 GMT

Now that I've got that second vet system out of my hair, I'll update the commander plug-in, release it as a debug version, then take the crash dumps from people to pass on to a friend.

I hope to have an update (that will still likely crash, but at least fix a few other things) soon.

It's hard to debug because I cannot cause this crash myself at all, and no one seems to be able to give steps on reproducing the crash, perhaps it has something to do with the regulators you guys use. But don't worry, it'll get fixed.

Subject: Re: [Plug-in] SSGM2.02 Commander BETA

Posted by [Gen_Blacky](#) on Sat, 09 May 2009 16:51:41 GMT

I made some Revivable buildings commands using reborns team fund function and commander function. The team all donate to team fund and if a building dies the commander can revive the building if there is enough money in the team fund. I made it ini configurable for the amount it cost for the buildings to be revived.

Requirements

- Renegade Resurrection
- Add to Reborns Commander plugin so it can uses its functions.

Under the SettingsStruct in the .h file

```
powerplantcost = 20000;  
vehiclefactoriescost = 20000;  
soldierfactories = 20000;  
refcost = 20000;  
basedefensecost = 20000;
```

Under void Load(); in the .h file

```
int powerplantcost;  
int vehiclefactoriescost;  
int soldierfactories;  
int refcost;  
int basedefensecost;
```

Under the SettingsLoader;

```
LoadInt(powerplantcost, "powerplantcost");  
printf("The cost for a Power Plant is %i credits\n", powerplantcost);  
LoadInt(vehiclefactoriescost, "vehiclefactoriescost");
```

```

printf("The cost for a Vehicle Factory is %i credits\n",vehiclefactoriescost);
LoadInt(soldierfactories,"soldierfactories");
printf("The cost for a Charcter Factory is %i credits\n",soldierfactories);
LoadInt(refcost,"refcost");
printf("The cost for the Refinary is %i credits\n",refcost);
LoadInt(basedefensecost,"basedefensecost");
printf("The cost for Basedefences is %i credits\n",basedefensecost);

```

Add to the .ini file

```

powerplantcost=20000;
vehiclefactoriescost=20000;
soldierfactories=20000;
refcost=20000;
basedefensecost=20000;

```

Main Revive Commands

```

///////////
///Revive Buildings///
///////////

```

```

```

The the only problem I have seen so far is when the building is dead and a player that is not a commander uses the command. It wont tell the player hes not a commander. If the building is alive it will.

can you show me the errors

Subject: Re: [Plug-in] SSGM2.02 Commander BETA

This might make things work a bit better for you.

You would need to apply the same sort of changes I made throughout your code. But it looks nice man.

```
class revive_vehiclefactoriesChatCommand : public ChatCommandClass {  
void Triggered(int ID,const TokenClass &Text,int ChatType) {  
int Team = Get_Object_Type(obj);  
int BuildingID = Commands->Get_ID(Find_Vehicle_Factory(Team));  
GameObject *thebuilding = Commands->Find_Object(BuildingID);  
if(Is_Building_Dead(Find_Vehicle_Factory(Team))) {  
if(GDICommander[ID] || NodCommander[ID]){  
if(GDICommander[ID]){  
if(GDITeamFund >= CSettings->vehiclefactoriescost){  
GDITeamFund = GDITeamFund - CSettings->vehiclefactoriescost;  
Console_Input(StrFormat("msg The GDI Commander just revived the Weapons  
Factory").c_str());  
Commands->Attach_Script(thebuilding, "RR_ReviveBuilding", "");  
Commands->Create_2D_WAV_Sound("pplant_powerup.wav");  
}  
else{  
Console_Input(StrFormat("ppage %d There is not enough credits in the team fund you need  
$%i. Use !tfdonate to add to the fund.",ID,CSettings->vehiclefactoriescost).c_str());  
}  
}  
else if(NodCommander[ID]){  
if(NodTeamFund >= CSettings->vehiclefactoriescost){  
NodTeamFund = NodTeamFund - CSettings->vehiclefactoriescost;  
Console_Input(StrFormat("msg The GDI Commander just revived the Airstrip").c_str());  
Commands->Attach_Script(thebuilding, "RR_ReviveBuilding", "");  
Commands->Create_2D_WAV_Sound("pplant_powerup.wav");  
}  
else{  
Console_Input(StrFormat("ppage %d There is not enough credits in the team fund you need  
$%i. Use !tfdonate to add to the fund.",ID,CSettings->vehiclefactoriescost).c_str());  
}  
}  
else {  
Console_Input(StrFormat("ppage %d You are not a team commander and cannot use this  
command.",ID).c_str());  
}  
}  
else{  
if(GDICommander[ID]){  
Console_Input(StrFormat("ppage %d The Weapons Factory is not dead.",ID).c_str());  
}
```

```
    }
}
else{
    if(NodCommander[ID]){
        Console_Input(StrFormat("ppage %d The Airstrip is not dead.",ID).c_str());
    }
}
};

I'm guessing that's part of the power plant revive command. You will need to post that whole command for me to fix it for you.

Also, you don't need to get the GameObject of the player.

 thanks.

That's pretty weird then, everyone else had no problems at all with it :-/
 Zeiss, if you're around still in 4-5 hours from now catch me on msn fm_reborn@hotmail.com, I will
 try to resolve the problem.

hmm seems i got the same problem. server restart after using the tc cmd. so i install a new clear
 server and br 1.52. i add only the commander plug-in so it looks like this:

[Plugins]
 01=BRenBot.dll

02=commander.dll

no other things added. what can i say? it crash again.

now the weird part. i test some maps and on non-flying maps, the server crash but on walls flying and city flying the commander plug-in works fine.

What version of server.dat are you using? Its not BlackIntel? Because when I use their version under x64 mode it crashing FDS when Im trying join.

Here is a debug version. Please use this and report any crashes with the crashdump. I will then be able to pass on the crash dump and the source code to a friend who might be able to see what the problem is. The source code will follow with a proper release.

This version should also remove the weird messages when a building falls under 50% health.

It's probably just some extra bracket somewhere. I didn't have access to the IDE when I typed it, nor do I now. This might work for you, but I cannot be sure, I'm at work...

```
class revive_vehiclefactoriesChatCommand : public ChatCommandClass {  
void Triggered(int ID,const TokenClass &Text,int ChatType) {  
    GameObject *obj = Get_GameObj(ID);  
    int Team = Get_Object_Type(obj);  
    int BuildingID = Commands->Get_ID(Find_Vehicle_Factory(Team));  
    GameObject *thebuilding = Commands->Find_Object(BuildingID);  
    if(Is_Building_Dead(Find_Vehicle_Factory(Team))) {  
        if(GDICommander[ID] || NodCommander[ID])  
        if(GDICommander[ID]) {  
            if(GDITeamFund >= CSettings->vehiclefactoriescost) {  
                GDITeamFund = GDITeamFund - CSettings->vehiclefactoriescost;  
                Console_Input(StrFormat("msg The GDI Commander just revived the Weapons  
Factory").c_str());  
                Commands->Attach_Script(thebuilding, "RR_ReviveBuilding", "");  
                Commands->Create_2D_WAV_Sound("pplant_powerup.wav");  
            }  
            else {  
                Console_Input(StrFormat("ppage %d There is not enough credits in the team fund you need  
$%i. Use !tfdonate to add to the fund.", ID, CSettings->vehiclefactoriescost).c_str());  
            }  
        }  
        else if(NodCommander[ID]) {  
            if(NodTeamFund >= CSettings->vehiclefactoriescost) {  
                NodTeamFund = NodTeamFund - CSettings->vehiclefactoriescost;

reborn,

Does the Ammo Drop feature drop 3 yellow ammo crates that stay infinitely for the rest of the game? (Like on St0rm's Extreme Co-op Server if you've ever been there)

To be more specific, if multiple players run across the yellow ammo box, does it disappear after the first player runs over? Or is it like, permanent?

(I believe the preset name for the yellow ammo box I'm talking about is
CnC_POW_Ammo_ClipMax)

Thanks for the work you've done on this already. I was just at Black-Cell's forums earlier today, and saw this exact same topic on the Commander System coding they had there. In fact, here is one of their more recent topics on 'Team Commander':

<http://forums.black-cell.net/index.php?topic=5760.0>

The way the ammo drop is described there, it seems more of something that can be picked up by only one person or is a destructible, one-time object.

Would you happen to be able to give any clarification on this? Or would I be better off asking the Black-Cell members themselves?

Regards,
TNaismith

The way the ammo drop is described there, it seems more of something that can be picked up by only one person or is a destructible, one-time object.

That's exactly how it was, except vehicles could pick up this crate as well. Only the enemy team could destroy it if they wanted to, though since they could just steal it, the only reason to destroy it would be if they couldn't reach it first. It was parachuted to the team commander's current position, provided he wasn't within a certain distance of the enemy base. I was able to find two screenshots among hundreds/thousands (I'm not gonna look through my videos) that actually had

the crate in it:

Unfortunately, the BC Wiki was never restored after the most recent website crash, so you'll have to make do with what's in that thread and an archive.org copy of the wiki here.

quick wiki description of supply crateSupply Drop is a Commander only ability that paradrops a Supply Crate at the Commander's position. This Supply Crate serves 2 purposes: it can be picked up by anyone on either team, except the Commander who called it in, for a full refill; the crate also has its own Healing Aura which does not stack with the Commander's. It costs 500 credits to call in a Supply Drop and it can only be used once every 3 minutes. The enemy can also destroy it with regular weapons fire. A Supply Drop can be called in either through the teamchat command !supply or the keyboard shortcut SupplyDrop(numpad period default). You cannot call down crates within or directly on the border of the enemy base.

It's really nice that reborn's trying to recreate some of the features that used to make Black-Cell my favorite server until it lost too much of its playerbase for me to care to hang around anymore. I miss the good times :/

Thanks for the work you've done on this already. I was just at Black-Cell's forums earlier today, and saw this exact same topic on the Commander System coding they had there. In fact, here is one of their more recent topics on 'Team Commander':

<http://forums.black-cell.net/index.php?topic=5760.0>

The way the ammo drop is described there, it seems more of something that can be picked up by only one person or is a destructible, one-time object.

Would you happen to be able to give any clarification on this? Or would I be better off asking the Black-Cell members themselves?

Regards,
TNaismith

It's similar to black-cell's version, it's a one-off pick-up. It doesn't respawn constantly. A transport copter drops off a wooden pallet crate, either team can pick up the crate, including vehicles. It is not destructable though, I never thought it was needed really.

Here is a link to a movie I made whilst making the plug-in demonstrating the supply feature.
<http://game-maps.net/staff/reborn/commander.wmv>

It probably wouldn't be any use asking BC members about this particular plug-in, as it is not supported by them or there own release, rather it is my own attempt as a commander system, based on there version from memory and documentation found on there site. As far as I know they never released there version, although I know that allot of there server-side mod ended up being too tied into the regulator to separate the the code and make it functional as a release.

havoc9826 wrote on Wed, 20 May 2009 02:41

That's exactly how it was, except vehicles could pick up this crate as well. Only the enemy team could destroy it if they wanted to, though since they could just steal it, the only reason to destroy it would be if they couldn't reach it first. It was parachuted to the team commander's current position, provided he wasn't within a certain distance of the enemy base. I was able to find two screenshots among hundreds/thousands (I'm not gonna look through my videos) that actually had the crate in it:

Unfortunately, the BC Wiki was never restored after the most recent website crash, so you'll have to make do with what's in that thread and an archive.org copy of the wiki here.

quick wiki description of supply crateSupply Drop is a Commander only ability that paradrops a Supply Crate at the Commander's position. This Supply Crate serves 2 purposes: it can be picked up by anyone on either team, except the Commander who called it in, for a full refill; the crate also has its own Healing Aura which does not stack with the Commander's. It costs 500 credits to call in a Supply Drop and it can only be used once every 3 minutes. The enemy can also destroy it with regular weapons fire. A Supply Drop can be called in either through the teamchat command !supply or the keyboard shortcut SupplyDrop(numpad period default). You cannot call down crates within or directly on the border of the enemy base.

This plug-in recreates most of that, apart from the commander can pick it up himself, and the wooden pallet crate is not destructable, and it can be called in anywhere...

The default settings are also 500 creds and a 3 min gap between the time you can call it in, but it's configurable to any cost and any time difference.

havoc9826 wrote on Wed, 20 May 2009 02:41

It's really nice that reborn's trying to recreate some of the features that used to make Black-Cell my favorite server until it lost too much of its playerbase for me to care to hang around anymore. I miss the good times :/

There's a bunch released now, I was hoping it might encourage others to do the same. I also miss

playing in black-cell and the good times there.

Ah, I see. Sounds like it can be a good addition to a server in any case. I appreciate the replies. I hope as well that other community leaders whom have extremely in-depth modded servers will also consider stepping forward to release their code, however the debate of whether that will make Renegade servers all look the same rather than unique and diverse will be brought up, and I can imagine that many people are against the idea of releasing code as it would 'hurt' the integrity of their own server/playing population.

I've seen this from some isolated servers I've been to, and I am pretty sure this mindset runs throughout a number of other Renegade-related communities.

Tiberium Technologies however is a great step in bringing together the skill and abilities of a lot of people, so that could be considered as compensating for the lack of will to release code for fun modifications to Renegade servers.

Anyhow, thanks again. Appreciate the work and motivation you put in to further develop this code for Team Commander.

Regards,
TNaismith

I cannot read crash dumps, but it is probably due to the way the chat hook works for getting the play name, based on part of there name.

When and if I ever get the time to re-visit any plug-in that uses that functionality that I released, I will go bacl and fix them all, and re-release them as 1.1 or whatever...

However, I am extremely busy for a while.

Found a bug

When you !Polcommander an enemy player it would say
<lastsuccessfullypolledcommandername> isn't on your team", as
potentialnodcommandername/potentialgdicommandername is kept as the last player.

Other than that good job.

If you have limited coding experiance, I would suggest you just change the cinematic files called Nod_Supply.txt and GDI_Supply.txt.

I would remove the part that attaches the "reb_supply_crate" script, and instead make it drop off a tank.

If you are feeling braver, then search through Commander.ccp in the source that's part of the download, and then amend the chat hook that calls this function, and the other scripts that are used in the chat hook.

You could hard code the cost of the drop if you wanted to do that in there yes.
 Specifically here:

```
if(GDITeamFund >= CSettings->supplycost){
  GDITeamFund = GDITeamFund - CSettings->supplycost;
```

You would change it to this for example if you wanted it to cost 2000 credits:

```
if(GDITeamFund >= 2000){
  GDITeamFund = GDITeamFund - 2000;
```

However, the cost of the drop has been set up to be a configurable option in the .ini file supplied in the download.

You seem to be getting the hang of this, for someone who claims to not be able to code, you've done well!

You do realise you need to compile this code, don't you?

I guess you opened them in notepad or something?

Basically, what you should be doing is opening the solution file (.sln). This file opens with visual studio.net2005 (which you need to install).

You can find out how to install a free version here:

<http://www.renegadeforums.com/index.php?t=msg&th=26642&start=0&rid=3415>

Using visual studio, you can browse the relevant .ccp and .h files a lot easier. Once you have made your changes and you are happy with them (you seem to have done this already), you can compile the source code (hit f5). This will then produce the compiled .dll file in the working folder of the source code.

Version 1.3 is now available, which should address the crash bug.

I was using a function that someone else wrote, the function assumed that all base game objects where actually scriptable game objects, but they are not. This fix came about from a problem on the APB server, and I ported the fix quickly to this plug-in too. So it isn't tested, but I can say with a fair degree of certainty that this should fix the problem.

Many thanks to Ghostshaw for providing some insight into this annoying problem.
