Did you install scripts? Also check in your renegade file for crashdump.txt, and paste the latest one into here, into a spoiler.

What's your setup? Which Windows version? Which scripts installed? Using Renegade Resurrection? This problem never occurred before and now suddenly started occurring while there have been no updates. Unless maybe RR? Or maybe it's a Vista update causing this?

The problem you have, is the problem i used have.
You need to download the 3.4.4.
