Ok. I have no idea what happens... but I use Windows Vista and Ren won't work. Now, you might say, well duh, its vista and renegade. BUT, the thing that makes me confused, is how Renegade worked when I got the laptop, but stopped when I got a skin. I took skin off, and burned it with holy fire, but Ren never worked again. I've been trying for 5 months to fix it with asgaroth, but with no success. He referred me to here. any help with this? what happens is I'll start the game, and it will go like normal. then it will play the sounds you'd hear. but despite it playing the sounds, it doesn't show any video, at all. just blank screen. And this isn't with Renguard, its just normal ren. Renguard didn't fix this either. any help'd be appreciated. I can't ren only half the time if I want to stay in the clan.

PS: compatibility mode nor system restore fixed the problem (system restore doesn't have far enough back point)

You probably installed scripts with bloom and your hardware cannot handle it.

I would suggest just reinstalling the game as per this guide:
