I think it goes down when new players join the server.

The problem makes me really cry.

Please help me.

What version of BRenBot are you using, what plugins and which versions of them do you have installed etc etc. We can't help you if you don't give us any information.

Also showing us what the BRenBot window says when it closes (run it in a command prompt if you need to to get any error messages, as explained under the troubleshooting section of the BRenBot readme file), that will make it much faster to resolve the issue.

Did you delete and/or modify recs.txt in the BRenBot folder? If so that's probably why it's crashing.

I modified recs.txt some days ago.

Thx a lot. The problem has been solved.

For future reference, you need a blank line at the end of the file, and it must contain at least one recommendations line, even if it is set to be from -999999 to 999999 or something like that.
