Hello,

This is probably in the wrong section but /meh. Anyway, I'd just like to know which file(s) is the patch. Rene has stuffed up for some reason and I think the best way to fix it is to reinstall.

Basically, when I tried to launch the game, it said "Could not locate renegade". Eventually, Resurrection started saying "unhandled exception has occurred in your application...The System cannot find the file specified"

This all started happening after Resurrection had a pop up message saying V 1.1.2 was available for D/L. I cancelled it...Also, I took the Resurrection launcher out of the Renegade folder.

I would of put this in the support forum, but this message as a general aspect to it aswell, so yea. No ones going to die if this is in the wrong section temporarily

If this is any help, the error details were:

Oh btw, I realise some of that error data wasnt necessary, but ah well.

```
System.ComponentModel.Win32Exception: The system cannot find the file specified

You may have more luck when posting on the RR forums?

I might have more luck in relation to error solving for RR; However, surely someone here would know what the patch file(s) are, so that I can save em somewhere else when I uninstall so I dont have to DL again.

If you just deleted the RR launcher instead of uninstalling it, I believe you need to rename game2.exe back to game.exe.
