Maybe you should try to solve the cause, and not the symptons...

You disconnect because the game could not talk to the server for too long. This is obviously caused by your own PC failing, so there's no need to increase that limit.

Perhaps you should reapply thermal paste to both the CPU and GPU of your pc.

What videocard do you have? There are certain cards that overheat whatever you do.

Check your Nvidia drivers, apparently there are drivers that screw up the 7900 GS fan controller.
