Alright, I have searched this forum many times and i have noticed people have the same problem as me. I have tried there solutions, and still no rene . I do run a vista home prem system and it worked well before, so then i go to installed sp2...and then all of a sudden my rene wont start up. So i have reason to believe that sp2 is the problem. I have tried to run in admin mode, ive right clicked/poperties/ clicked run as admin also click run this program in compatility mode for all the choices (ie windows 2000, windows sp1) I have even went as far as to format my computer and install all windows updates and then in stall rene. And i still got the error. So anyone with an idea of whats going on or how to fix this. It would be greatly appreciated. Thanks !!!

Searching through the forums, I am genuinely surprised there have been no solid solutions for this problem because it happens to many people.

Try Saberhawk's program on this thread:

<http://www.renegadeforums.com/index.php?t=msg&th=29912&start=0&rid=4> 882

If that doesn't work, you may want to shoot off a PM to Saberhawk to help you.
