Looks like a minigun with the 4 barrels.

edit: probably a beta minigun.

but the beta railgun looks cool and hi-tech
The current ren's railgun looks like an M4A1 with laser tech on it

If the current weapons we had now had been the actual BETA weapons, and the beta weapons the final build weapons, they would have been better

i am wondering who is gonna make the beta railgun?

not sure whether thats a beta engineer aswell
cuz i seen a red helmet skin for the nod engineer
