You need to start up Renx not gmax.

(The Renx plugin is installed via the rentools setup, if it is installed it should be located in the gamepacks folder in gmax)

Btw the green piece is not fitting the purple place duno if thats intended.

Gmax can only export as P3D, which it can't even import back... I never found something that could import it anyway.

Though, try googeling it

<http://www.google.nl/search?q=convert+p3d&hl=nl&ie=ISO-8859-1&aq=f&oq=&btnG=Zoeken>

and try sites like these, well if you really want it.

<http://forums.techguy.org/windows-nt-2000-xp/462979-p3d-file-how-do-i.html>

Else, you can always search for gmax exporter ore something.
