Im trying to run the wrapper. However it reports a error.

```
root@vps187:/home/renegade-server/Server# ./renegade_server
./renegade_server: symbol lookup error: ./renegade_server: undefined symbol: Perl_Icshlen_ptr
root@vps187:/home/renegade-server/Server#
```

Anyone know how to fix this?

You should not run the LFDS as root!

What wrapper are you referring to here? There are several. It looks like your Perl setup has a problem.

i fixed the problem. It was indeed a issue, while i was not running perl properly i think

However the new problem is that the brenbot seems to have issues communicate to the renegade FDS, the wrapper is running but it cant connect for some reason.

Don't leave us guessing at the problem. You are not giving us a lot of details.

What wrapper are we talking about. I'm guessing the xwisp wrapper. What version are you running?

What errors are Brenbot and the LFDS reporting?

It most likely is a binding issue of either brenbot or the lfds to the right network interface.
