I just now started to make maps again for Rene, and I can't find a working 3ds max 8 exporter ANYWHERE.

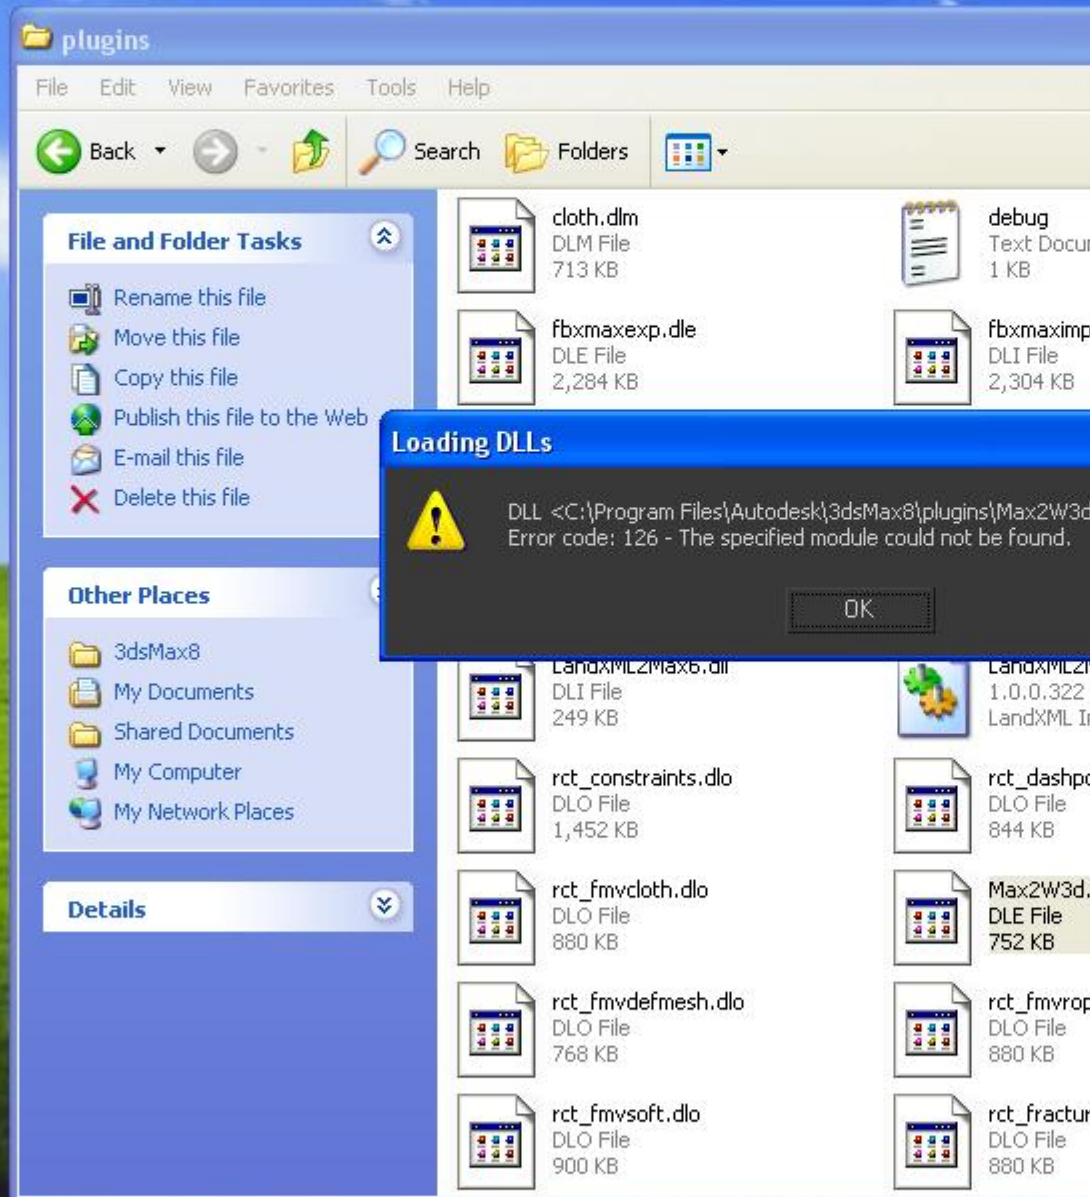

Every time I do one, it always gives me this error.
(download the JPG)

I've tried like from 4 different websites, it NEVER fixes. It's getting on my last nerve.

Thanks,
N1warhead.

Oh yes, that's the only version I like, THE ONLY one.
So I know the differences between the different ones. And not to mention it says "3ds max 8" lol.

Okay this is irritating me, I even tried my old 3d's max 7 copy and it still doesn't work. What is going on with this crap.

I've tried the one from www.game-maps.net, I've tried the one from www.planetcnc.com and so on. None of these things are working for some reason.
