So I installed Renegade on a new computer I recently built, and installed the core patches, but It won't run on the correct resolution. In my renegade config tool it says that I'm running on the resolution I WANT to run it on which is 1600x900, but when I start renegade it runs on 800x600. This only happens when I use CP2's game2.exe so I don't need to put in the disc, and I'm way too lazy to actually use the renegade disc.

Does anybody know how to fix this?

Run both the config tool and Renegade itself in admin mode or the settings from the config tool wont work properly.
