http://ren.game-maps.net/index.php?act=view&id=1378

This program will examin packets sent to the server and discard them if they are corrupted.

It is to protect the server from so called 'flood attacks'.

v00d00 originally wrote it for MP-Gaming when we had some kids back then attacking the server.
I forgot we even had it until i saw it running on Strike his serverpc and figured i'd upload it to
game-maps for others.

Some people get "unable to load IpDrvFlt.sys"
Does anyone know how to fix that?

Put it in your windows drivers directory maybe? I can't remember how I got it working, it's been so long since I've used it.

Its in windows system, system32 and the programs folder but i keep getting a failed to load.
I remember it has something to do with regsrv32 to register the driver.

Does anyone happen to know what driver to install for FDSMonitor to function?
I can then re-add it to the FDS Install Tutorial.
I wish v00d00 was still around

I don't think it's needed, BI's Server.dat is more effective.
