I remember seeing some graphic enhancement mod called ENB for GTA:VC which added motion blur and Depth of Field. It worked for renegade too, although it made the game crash whenever you alttabbed out of the game.

Any chance of seeing this included as an option in TT?

that shit was terrible, it basically just increased gamma/brightness. You can achieve it by adjusting those in your monitor and/or advanced graphics settings

What are you talking about? It also adds motion blur and some other cool stuff. It's possible to disable the horrid bloom.

MOTION BLURRIES

MOTION BLURRIES

Hmm my bad, the "ENB for GTA:VC" meant an entirely different thing in my mind.

that looks fun, but it blurred everything, including text and hud.

left 4 dead has it (max graph settings i think) looks quite cool, but indeed the hud and text shouldn't be blurred

I HATE Blur, Bloom, HDR and all cr** like this!

These are the most USELESS graphical "features" ever. The first thing I EVER do in a new game is that I deactivate this cr**.

It's true that blur and all the other effects can be extremely annoying when it's over-done (like in the video, which i did to make the effect a bit more obvious). But a subtle implantation however would be quite nice.

Agreed, but as Stefan said, when it's much more subtle (and done only when you're moving at high speeds), then it's not so bad.

Bloom still sucks, though.

I'm sure someone could get the bloom in ren to look nice.

Renegade can look amazing with a bit of work, the problem is that the same techniques needed for implementing most of the shiny graphics make keeping all the rendering code working on old

video cards painful.

We already dropped 98/95 support, just don't support the older graphics cards with the new features. No reason to hold back just because some people are unwilling to upgrade their machines.

I wouldnt just abandon people with older systems with TT. I think quite a few people still play on older systems. A function to turn that kind of enhancements on or off would be the best solution imo

NOTE: For me it doesnt matter

Leaving people behind with bad machines is a horrible idea. You would lose 25% or more players. Having a feature to turn it on and off is a good idea.

Unzip these files in your renegade/apb/reborn directory (not data) and watch the awesomeness make your face melt.

Pretty cool but the further you look the blurrier your HUD, craracter etc becomes

It gives the coolest effect when something explodes or when you die imo

idd. Games get larger and bigger in graphics but gameplay lacks now and then and storylines get shorter and shorter

Though games that are good on these points may be optimized on graphics ofcourse (GOOD graphics)
