This is a really good tip when on GDI on Field, Get a Hotwire and go through the tunnels by the refinery, there will be a ledge there... you can hide behind the rocks to get there...get behind the ledge (Don't worry the obelisk won't attack) You can either plant a beacon there or try to jump on the ledge then jump on the barrier that blocks your way to get to the back door for the refinery. Then voila... plant c4 and all you hiffy jiffy crap on the MCT. BYE BYE REF!!!!
