This is a small skin that changes the NOD Nuke into a Snow Storm. Install by adding the two .dds files into your renegade data folder. Currently I have been un-able to take in-game screen shots, but here is the image I will provide:

Download (RAR) Samous Web:  
<http://samousfiles.webs.com/Ren/SnowStorm.rar>  
Download (ZIP) Renegade Forums Bellow.

I tried this one and it right out sucks...  
All it does is replace two textures.

The nuke PT icon.  
And it turns the nuke explosion white instead of red/yellowish...

Nothing special in my opinion. I just wasted another minute of my life downloading this.

Well, yeah, what did you think it would do? I put a snowflake texture for the nuke instead of the fire one, what would you do for a snow storm? Really... it still has to be the same kinda thing, I'm not creating a whole new object in-game, I mean, wouldn't that kinda effect stuff? How would I make an object that works exactly like the nuke? Phef, I didn't even say I liked it though.

Well...What you could have done was make an entirely new emitter for the nuke explosion which actually looks like a blizzard.

Yeah, but I don't really want to change the actual size of it, I still want it to be in the same general area as a normal nuke... plus, I'm not exactly even average at much of this.
