The new command should be "STFU and PLAY!" This will work perfect for all the people that complain all game and for the people that hit radio command after radio command all **** game. It gets so annoying I think that "STFU and PLAY" would be a sweet command. What do you think?

they should make radio commands an option for hosts because people don't know what the f**k

they are they are doing.....AZ, that would be an awesome command!

WW should have an anti-spam patch, which doesn't let you use the radio commands over 3x in 5 seconds, a flood control. 10 is too long to wait if something important must be said. Even spammers must have something to say sometimes.**** I know it sounds dumb, but the next best thing is shooting the mutha****ers, and if you stop to shoot all the spammers, you'll not get one shot off at the enemy

A useful thing would be: If you used a radio command, like "I need repairs!" or "Im in position." Your location on the radar would be displayed on all your teammates radar from long distances so they know where you are to come help. Another command could be "Im under attack!"

you know what would be better? If you could only say two, then had to wait ten seconds.WOuld that be great or what? No more missing "Such-and-such building under attack", or missing the beacon announcement/beeps, etc...WW, DO this! For the sake of your gamers!

Some of the more team specific ones would be great. From what I see, most people don't listen/obey the commands because they are thrown out so often. You'll have a newbie or a n00b pressing the wrong buttons and when they finally find the right one you don't know which they meant. Attack that structure or defend the harvester? Know what I mean?

"Yeah! I am tired of going into a game and seeing Hotwire carrying a nuke beacon, being stealthed, and having a +5 battleaxe of repulsion. Never fails - I tried to play last night with my Quake III character on the Under map, but kept getting taken out by an Engy with a squirt gun." For these types of players, we need to have the new radio command: QUIT WHINING!!!!!!

I wish they would get rid of all 30 autochat messages so the the N BZ couldn't use them. Then anyone who wanted to send a message would have to type it.

how about a set like this "power plant infiltrated" "barracks infiltrated" ETC.. This will get people in there faster because a tech in a building and some dummy shooting from his base with a rocket guy is a big diff.

Remember:If someone is better than you (and believe me there is always someone better than you) are you a newbie to him. I say give newbies a break, you were once one. It might be a newbie charging your butt while you are getting mega points.Get rid of the "get outa my way" radio command, anyone that uses that command just announced that they are an *ss. If I see someone on my team use that command and I am an engineer charging them.....oh look its coffee break!
