Does anyone have the Renegade Registry entries?

I need all the keys and default values for Renegade, including path, and serial entries (serial can be blank, i have a few valid ones).

Any help into this would be fantastic, thanks!

Fox out.

I just need the registry entries, nothing Renegade related will work because i don't have them, and i can't be bothered running through the installer again (let alone not having it on hand, CD's shattered).

If i could have the keys, and of course change the serial, options, and location paths, i'm hoping that it shouldn't complain and just work.

Just run game.exe (in admin mode), it will automatically create the appropriate keys and you can go and edit them as required.

I tried this in hope that it would recreate keys, but it seems to not like it. If you have any more ideas, feels free to add my MSN or catch me on IRC.
