Well, as the topic suggest. I can't move in renegade. I reinstalled it just fine today, and I can navigate the server lists, but when I join a game, I can't do anything, not even exit. I have to use the task messenger to close it. So, any help on fixing this would be greatly appreciated.

I installed the 3.4.4 scripts. But I can try to go to a past one then.

I suggest deleting scripts.dll, make a copy of scripts2.dll and rename that copy to scripts.dll.

If those dont work, i suggest you delete a .dll that begins with a D8

Reinstall using these steps:

<http://www.renegadeforums.com/index.php?t=msg&th=24533&start=0&rid=4> 882

After each step, check if it works (first time being after installing patch 1.037).

Try changing the compatability to windows XP SP3

And set it as admin

this problem happened to be about 2 or so times. And it happened yesterday for me. I am playing TFD Renegade on Windows Vista with CP2 and scripts 3 (pure mode).

I too don't know what exactly causes this and each time it happened I had to solve it by a clean reinstall like today. Usually, the symptoms are some extreme lag following by a lost connection to server and then a complete crash of my Renegade back to my desktop.

And when I click to play Renegade again, my keyboard goes dead so I would have to watch the EA logo animation and the short orangey intro scene. After that I can click the menu options and get into a server but my keyboard and mouse would be dead after joining the game while I am left staring into the PT. So I have to press the Windows key or ctrl-alt-del to go back to desktop and start taskmanager to close. Restarting doesn't work either.

It rarely happens but its a tad bit troublesome to reinstall when it does. but I have my discs/serial in a safe place so no problems.

just a few thoughts...

After each step, check if it works (first time being after installing patch 1.037).

Well, I tried this. After I installed the CP2, it wouldn't let me move or do anything.

Are you using the numpad for movement? If so, delete the content in keys.cfg (data folder) and try again.

The obvious solution is to not install cp2 then...

goddamn this has happened to me yet again...

I am going to skip CP2 this time and see how it goes...

This happened again just now after I changed my key config in-game. I figured it was something with my keys configuration and didn't want to reinstall so I played around with the files in my Data folder. I deleted everything in my config folder including CONFIG.DAT

After starting up Rene again, the problem is gone and a new CONFIG.DAT file is generated. So atleast for me it was nothing with Core Patch.

Thought I would share.
