Note: Due to a previous problem, I can only run Renegade via RR.

Recently my renegade changed to Windowed Mode, when I ran it and im not sure why. I want to turn it back to full screen. When I open WWConfig, the windowed mode is showed as un-ticked (Not Selected). If I change any settings then my ren client isn't any different.

Please help me

You did try restarting Renegade after changing the config, right? (Just checking)

Vista or 7 I take it? There are alternatives to RR, like a launcher I posted in a topic around here a while ago. Your current problem is caused by wwconfig being run in administrator and the game as a regular user *or* vice versa. Both the game and wwconfig need to be run with the same

privileges or registry virtualization will kick in and cause issues like this.

(Gonna take the above suggestion, will post what happens)

Status: Fixed!

I love you! <3
