Is it possible to make the Renegade client save it's screenshots elsewhere besides in Program Files? In Win7 (probably Vista), the UAC screws up the built in screenshot saves.

Yes, install it to C:\Westwood, even if using TFD.

Or, run it as admin.

UAC related issues have been fixed; screenshots, settings, and other files that Renegade needs to create will be created in your user profile directory/registry. We're also including a patched WOLAPI (for Renegade only) that properly stores everything in your user profile registry, so there won't really be a reason to run Renegade as administrator at all.

Or, run it as admin.

Actually..even installing it there and running with admin mod doesn't solve the issue. The issue is that Vista/Win7 make /renegade/data a read-only folder for security reasons, and its basically impossible to undo it from the last time I've tried

You're doing something wrong then.

Running Renegade in admin mode also makes it default to your desktop screensize.

Thats because you need to set wwconfig in admin mode as well. wwconfig in admin mode = settings for renegade in admin mode.
wwconfig without admin mode = settings for renegade without admin mode.

Why do I have an American flag by my name, when it clearly says "Canada" for my location in my Control Panel.
