Hey everyone,

I'm just wondering if anyone has any ideas to test what specifically is causing crashes on my server, Cloud C&C.

I am almost 100% sure its my mods that i have on the server, but really i have tried removing things and debugging for the past two weeks and i have not come up with much luck.

It hasn't always crashed this much, and even when i remove everything i added recently, it still seems to go kaput.

Is there any way to detect what specifically is causing a crash?

I have over 700 crash dumps if they will help.. but yeah.

Btw i'm using luaplug 5.0 + have custom objects.aow.

Again, if i'm wasteing your time sorry, i just want to know if anyone has any ideas on how to find out what is causing the frequent crashes.

Thanks and

DarkOrbit

these 3

01=biatch.dll
02=BlackIntel.dll
03=LuaPlugin.dll

nope, not at all.

just downloaded ssgm + installed.

Remove the LUA plugin's and see if the crashes stop.

On what CPU and OS you host it? Are you using original server.dat?

You also might wanna attach 2 of the newest crashdumps (to see if its crashing on the same thing, or different).

blackintels server.dat patch or whatever.

ahh its on a box on windows something (old like 2003? idk.)
uhh if you need detailed cpu specs:

and reborn, it mostly likely is the luaplugin but i dunno what specifically about the lua plugins it is about, i've spent hours looking through seeing what could be wrong.

&& everything works individually when i tested, i did every command the other day and nothing directly crashed it.

However i'm certain if i removed the luaplugins it wouldn't crash anymore, because even in the crash dumps it says

Exception occurred at 0x0251C834 .text:0x1103C834 (LuaPlugin.dll)

Try load LuaPlugin.dll as first SSGM Plugin. Next biatch.dll can be removed from this section because when you put their dll files to RenFDS it will load biatch.dll automatically. I think is modded MSS32.dll to load it.

BlackIntel server.dat? I personally had also problems with their modded file. Try find me on MSN next week. I should come back from holidays on 31.8. and I will send you another copy of that file.

Next check this: advanced tab (computer properties) - performance settings - Data execution prevention and tell me what is here set.

okay.

removed biatch.dll + moved luaplug in to 01

okay bout the server.dat

It has

"Turn on DEP for all programs and services except those i select"
