Hey,

atm im working on a "modded" JBServ version. But i think i fucked up the output. Like:

[Playerkill]

[Purchase]

[Beacon]

[Building] Under Attack / destroyed

and the other things like that.

Could someone give me the part?

My problem is, normally JBServ say this if the FDS Starts:

"(CrYBoT): Loaded JBServ Scripts created by bond5820"

My bot doesnt show up this message, but now it loads the settings from the ssgm.ini also the [Plugins] (thats what i want)

any idea how i could fix the output for the "playerkills,buildings shit]

ps: I use JBServ cause it was made with a mIRC script the only "language" i know a bit about xD

,
crysis992

You would be better running cloudserv, and editing that. JBServ is outdated and buggy
