---

2 days ago i decided to reinstall renegade because i wanted to remove my skins. I reinstalled but when i try to run renegade it says "bhs.dll requires 2000/XP/2003". Without the scripts my ren runs great. Im running on Windows XP and these scripts worked before on this computer. These are the steps i did to un and reinstall:

- 1) Uninstalled Renegade
- 2) Removed all files left in the westwood folder and deleted the westwood folder itself.
- 3) Reinstalled Renegade
- 4) Patched it to 1.037
- 5) Replaced the game.exe with the one from the NO CD crack 1.037
- 6) Installed scripts 3.4.4
- 7) When trying to run Renegade, pop up shows up, "bhs.dll requires 2000/XP/2003. Ren closes itself.

Without the scripts it runs perfectly.

Thanks in advance

Edit:

I fixed the problem with the help i got on Jelly forums.

For future reference:

- Updated my directX components
- Run Renegade in compability with Windows 2000 und check the No Visual themes button.

Thats what fixed it for me...

Thanks to STEREODOG

Topic can be locked i guess

For future reference, just remove the .dds file if you want to remove the texture replacements. No need to reinstall.
