Well ive finally got my server up not like i want to but it runs

it has the kambot serverside mod

i would like to invite you all to my server to test out and give feedback on what i might create next

check my site for more functions

<http://kambot.webs.com>

No pictures? No source? No tangible items? Why are you posting this here> should be in General Discussion. But good luck with it, you just joined the rest of the bunch of servers with the same mods. With the exact same thing.

im not making a server with same things as any other kambot has many other futures and used to be a busy server until mike quitted im trying to bring that fun server back to life if i publish its source its no longer unique XD

ps added website to first post

I cannot move the topic as I am only a mod of the mod forums, but have requested a move.

I love the attitude BTW, nice one!

Kamuix Lite was indeed a great server, albeit buggy and with a bit of a learning curve.

Good luck with it, I might pop in sometime.

robbyke wrote on Thu, 07 October 2010 16:33if i publish its source its no longer unique XD
When I released the source I made it publicly available to anyone interested. Only the parts of code contributed by others are private since I had not asked for permission to distribute their work at time of release.

That said, more than a few people have downloaded this mod. I had hoped people would make their own crazy alterations instead of using the boring old stock copy though.

Altzan wrote on Thu, 07 October 2010 19:09Kamuix Lite was indeed a great server, albeit buggy
Ah, but that's the beauty of playing with bleeding edge code fresh off the svn repo

I didn't mean for an attitude, I meant that there are 10-20 build servers so its really not possible to make a unique build server. Now if he implemented a new game type or build mode then posted screen shots and a video and told us to check it out i'd be impressed but when you tell me your hosting another build server its like

meh.

im not gonna use the boring old stock because i didnt really liked your last changes
i remade the vtach commands removed basegapgen made it a defense
readded purchase terminals
and now im trying to launch so i get good ideas from a community

halo2pac wrote on Fri, 08 October 2010 03:09I didn't mean for an attitude, I meant that there are 10-20 build servers so its really not possible to make a unique build server. well you say it so easy but what new game mode would be fun with defenses and im just a noob scripter so a new game mode would have no idea how to start if you have buildable defenses you better stay in aow im trying to make my server more then just build you can also use powerup buy new chars and weapons defenses are not that plenty and are just to make it more fun you dont even give a chance ive just started and you say 10 20 build servers? i only know 2 but ive been out community for a long time

I recommend you start using capital letters at the beginning of a new sentence, proper punctuation etc.

I also paid a visit to your website and I can tell you beforehand that you are not going to find a good host using the forums on your website. Besides that a host wants to know for sure if your idea has any potential/future at all. Else it would just be a waste of time and effort. Consider renting a server at <http://www.mp-servers.com>. As far as I know they're rather cheap.

Don't expect someone to offer you a server for free as they cost a lot of money and the chance of getting a sponsored server is not that big. Especially since you haven't built-up a reputation yet.

I think it would be best if you thought this idea over some more before you start wasting your time on something that might not have any future at all.

I'm not trying to annoy you and I'm not trying to make an idiot out of you. It's just some advice.

I know this has no future.

I know that servers cost allot of money.

I'm not starting this to get shot down and just give up.

If i don't try to make something ill lever get any reputation.

And instead of just trying to get me down try to say something useful which i don't already know

.....

I think everyone is just (rightly) fed up with the same old generic servers hogging the list, especially since more than half the servers are constantly empty. They're just bored and want something new/unique.

[View Forum Message](#) <> [Reply to Message](#)

Well they can shoot down those who actually have the time to script and make a unique server or just get even more annoyed that there don't come any new.

I didn't post it here to get shot down i hoped some people might come and try or might even give some help.

Aw well as it seems I cant get RR to work with brenbot my server will stay a small disaster

I dont my friend lives on same street uses same renegade key. I havent even played in jelly servers since i had come to kamuix lite.
I have logged in once with that name in jelly but i went in thought no use and left so dont tell me that i lie its pathetic to go spam and especially not good for me hence i want my server to get full not stays empty because of childish behavior

Who cares? its not like servers actually lose traffic to this...most likely nobody even left to go try it.

As far as I can determine, they're not. They do have the same ISP, and probably live quite close to one another, however.
