Hi, it's been some time since I've played Renegade. I went to a server today and apparently I need to install scripts 3.4. Now, I have the file downloaded and I found the readme on how to install them, but it's way to complicated for me lol.

I had found a link in several places about an installer for these scripts, but the site is 404.

What I wanted to know is if there is any other place to get this installer?

Thanks for your time!

[http://downloads.cncfps.com/C&C/Renegade/Updates/Renegade\\_Update\\_3.4.4.exe](http://downloads.cncfps.com/C&C/Renegade/Updates/Renegade_Update_3.4.4.exe)

Basically all that needs to be checked is scripts 3.4.4 (which is already checked) and Key Configuration Tool.

You'll also have to make sure the path is pointing to YOUR Renegade directory, it usually gets the right one though, I would suggest just checking to make sure it's right.
