Its not working on multiple computers, to play lan games, anyone know how to fix? It returns to main menu when you click it.

Thanks

I think you have to install the old ipx protocoll in your network settings.

Thanks, I'll look into this more but looks almost impossible to do on Win 7. One computer is XP, so I will be able to see if that is the issue or not.

There's a guide on planetcnc.com in the tech troopers section.

You do indeed need the ipx protocol.
