For some reason, I cant make a topic in the general discussion forums...anyway, Im having difficulty disabling my onboard vid card...I have a HP pavillion (XE734) and I tried this [http://www.hp.com/cposupport/personal\\_computing/support\\_doc/bph06273.html](http://www.hp.com/cposupport/personal_computing/support_doc/bph06273.html) and it didnt help

giving me problems. IT LAGS LIKE HELL! I gotta disable that oboard card asap. when i go into setup (F1 during start up) I try and disable the on board, all I get is 512K and 1M, no disable. Anyone with a decent brain, can you help me?

Well, I went into config, only showed GeForce2. I got into BIOS and I cant disable my on-board i810 graphic card. all I need to know is how to disable it.

thx d00d....anyway, my discovery...is..as...as...as...follows.(Mimicing my geforce2 and on-board video running in renegade together).Quote:Originally posted by ThunderChicken:W00TAGE!!! I know how to fix it now. I was talking with my dad on he phone and he said that we have to switch on the jumpers on the motherboard. Then I can disable the on-board in BIOS. If anyone is

having a similar problem, refer to this. [/QB]Never mind this last comment, I tried to change the jumpers on the mother board. I found the settings I need to be able to disable the on-board i810. When I looked inside, I looked where they were supposed to be and my dad saw that the pins were removed. It seems Hewlett Packard removed them to prevent us "Customers" from upgrading our comps. Quote: There are no jumper blocks to set on this motherboard . Intel Socket 370 Celeron processors have locked frequency multiples and use an external frequency of 66 MHz. Thats a quote directly from [http://www.hp.com/cposupport/personal\\_computing/support\\_doc/bph07170.html](http://www.hp.com/cposupport/personal_computing/support_doc/bph07170.html) ...I personally think they removed it so that you have to pay another \$1000.00 to get another comp . It's a money thing . Pls, save yourself some trouble, DO NOT get a Hewlett Packard Pavillion XE734 (and maybe read up on the computer before you buy). Just learn how to build a comp on your own, You save a lot of money that way.

Im more relieved then mad. I hate getting tickled, prodded or dragged by my sis to get off the comp. After I get my own comp, I won't get tickled, prodded or dragged away from MY comp. So far I have...-GeForce2-Monitor-190 MB Ram-10 GB Hard drive (plenty for 1 person)-and possibly optical mouse (MAYBE, I may get my dads opt mouse...if its compatible)And the rest of the stuff...shouldn't be too much(getting the rest of my stuff of my Aunt's BF).
