Does anyone have GDI samsite model for gMax/RenX ?  
Or at least a W3D for it?

I would like to use it on the COop 4.0 coop maps

Anyone has?

Greetz zunnie

Yep I got one.

This one is used on multiple newmaps.

Not sure who made it.

I dont have a Gmax file for it, it can be created if required.

But deploying sams is easily done in LE. (Samholes are a Renx part)

If this version isnt good I can quickly make another one by hexediting.
