Anyone planning to write code for scripts 4.0 (including SSGM plugins) should obtain a copy of Visual C++ 2010 now as they will need it to work with Scripts 4.0.

Is there anyway to change the hideous visual theme of VS 2010?

---

---

Subject: Re: A notice to anyone planning to write code for scripts 4.0

I think VS2010 looks pretty good personally, a nice simple colour scheme. What more do you want?

---

---

The earlier Visual Studios colour scheme which doesn't look terrible.

---

Oh, you can easily close the solution explorer and all other extra windows and just be left with a text editor. Thats what the X buttons are for in the top corner of each window. The toolbars can be removed by right clicking on it and choosing custmomise.

I hate how 2010 collapses to definitions and leaves those damn blank lines after each one. I am sure there is a setting to turn it off though, whether it requires changing the font or w/e, I just have not used it enough to take the time to figure it out.

Visual Studio Extension Installer

-----  
This extension is not installable on any currently installed products.

-----  
OK

I'm using VS 2010 SP1.

Are you using the express edition?

```
<SupportedProducts>
  <VisualStudio Version="10.0">
    <Edition>Ultimate</Edition>
    <Edition>Premium</Edition>
    <Edition>Pro</Edition>
    <Edition>IntegratedShell</Edition>
  </VisualStudio>
</SupportedProducts>
```

You could try adding the express edition to extension.vsixmanifest and see what happens but idk if it would work. open the visx file with winrar or another program like it.

The color scheme can be messed around with significantly.

Colors!

Tunaman wrote on Thu, 01 September 2011 08:47 I swear the old ones had the solution explorer, etc, too anyways

Yeah, they do, I have 2005, 2008 and 2010 installed here and they all have it... just VS2010 makes them more prominent in the default layout configuration. I personally find (some of) them extremely useful, I manage all my project files from the solution explorer.

Class view on the other hand.. not overly useful for my since our files are named after the classes they contain anyway, but for languages like c# where classes tend to be used more extensively for smaller things it might come in handy I guess...
