What did you try? What is happening now? Note that TT also changed bandtest.dll.

And out of interest, why did you uninstall TT?

Quote:i ppl there is any way to run TT among whit models replacement? i know that my opinion is not relevant but if i cant use them, i am afraid i will keep using 3.44, so hope this wont be forced upon players or most probably i will stop playing ren Sad, i know some models can give you advantages over otters, but that kind of stuf are easy detected actually i belive, though i have no problem whit the disabled BB, but i am sure i am not the onlyone that loves to customize his ren, and prevent player of use some of his weapons/chars models can probably harm the game instead of impruve it, but again it is just my silly opinion.

this are my reasons, the only problem for me is that i cant use my models replacemst whit TT, and i hate orinal ren grapics lol, hope this can be fixed, though i have no problem whit the buildings bars disabled thing.

Why I would like to uninstall it is clearly your buisness guise. I just asked for help

But to stealtheye, I want to uninstall TT because i have a very noticable frame rate drop

NACHO-ARG, just get the server owner on the server(s) you play on to approve the files. It's unfortunate, but necessary to get some protection against "bad" model changes.

resistor1, thanks for posting the reason. I regret it that you chose to uninstall TT instead of searching for a solution with us though. Knowing the reason may still help us fix the issue if we see it happen for others too though.

I bet his problem is VSync. As in, the default configuration is VSync enabled (for whatever reason, I don't know. It's not good though.) and a lot of people might not know how to turn it off.

Are you getting an actual frame rate drop or are you just going by what the Wrost FPS counter says?

My FPS stays at 60 (before TT and after) however my worst FPS drops now and again but I don't actually see the drop if that makes sense.

Could you post specs?

TT were actually planning to remove that "worst FPS", but it somehow got forgotten. You shouldn't go by it.

Clients running at 60 fps well have physics that are more likely to match what the server is coming up with.

The vsync causes the reticle to respond really slow.
